Agenda:

| Time | Item | |
|-----------------|--|--|
| | Welcome & introduction | |
| 9:00 am-5:00 pm | Water quality monitoring and management | |
| | Introduction water safety plan approach especially on existing | |
| | IDP camp water supply system | |

| | Fecal sludge management in IDP camps | |
|--|--|--|
| | Diarrhoea control and preventive measure in IDP camps | |
| | Hygiene practices improvement by using hygiene promotion | |
| | activities in IDP camps | |
| | Others | |
| | WASH 4W Matrix and regularly update information | |
| | sharing | |
| | GHD events in October 2017 | |
| | WASH training | |
| | Way forward to improve WASH services | |

Minutes: Initially, Kachin WASH Cluster coordinator explained overarching view of WASH situation in Kachin IDP camps including gaps (activities, geographical, funding) based on Quarter 3 (July-September) 4W Matrix. After that IRRC explained overall WASH situation in KCA IDP camps except Mai Ja Yung corridor which are full meet or partial meet with WASH minimum requirement among the IDP camps.

| Topic 1: Water quality monitoring and management | | | |
|---|---|--|--|
| Summary of discussions | In KCA, only SI/KBC-Bhamo shared water quality test result to cluster regularly. In 2016, KBC-Myitkyina WASH team tested water quality in 6 IDP camps in KCA. Therefore, 7 of 18 IDP camps in KCA covered water quality monitoring activities, however other 11 IDP camps are still left behind to monitor the water quality so far. Kachin WASH Cluster coordinator encouraged to WASH actors who are working in KCA to monitor water quality regularly at least by quarterly. At the moment, Liaza based Metta Development Foundation WASH team did not have Water quality test kit and will discuss with SI/KBC-Bhamo WASH team to request WQT activities to cover for Hpone Lum Yung and Wai Choi IDP camps. | | |
| Action points | All WASH actors in KCA agreed to share Water quality test results to CHD regularly after testing. CHD and WASH Cluster will analyse the results and share summarized report to respective WASH actors to manage and improve water services among IDP camps. | | |
| Topic 2: Introduct | Topic 2: Introduction of Water Safety Plan | | |
| Summary of discussions | Kachin WASH Cluster Coordinator presented Water Safety Plan approach to KCA- WASH actors to manage and improve Water services chain from source to end users. Only water quality test action cannot improve water services chain and need to add water safety plan approach on existing IDP camps water supply system. Cluster Coordinator said that a water contamination event can occur anytime and anywhere. Therefore, all WASH actors need to aware on Water Safety Plan approach and improve quality of Water supply services among IDP camps as an action. | | |
| Action points | All WASH actors in KCA agreed to add water safety plan approach in new WASH in emergency project (not acute phase) | | |
| Topic 3: Fecal sludge management in KCA-IDP camps | | | |

| _ | |
|-------------------------------------|---|
| Summary of | .KDG presented fecal sludge management situation in KCA-IDP camps. At |
| discussion | present, KDG can cover around liaza IDP camps such as Woi Chai, Hpoung Lom |
| | Yung, some latrines units from Je Yung IDP camps and Liaza Town jointly |
| | implemented by Liaza municipal. SI and KBC-Bhamo has a plan continue to |
| | implement desludging activities in Je Yung IDP camp. Hpone Lon Yung IDP camp |
| | committee also start to consider to construct the sludge treatment site near by |
| | the camp like on-site desludging to overcome high transportation cost. Currently, |
| | |
| | KDG collect the night soil from IDP camps and carry to treatment site where |
| | outside Liaza municipal area is quite far. In rainy season, desludging activities are |
| | facing transportation especially hill site situated IDP camps. |
| | WASH Cluster Coordinator suggested to WASH actors, to follow the standard |
| | operation procedure of desludging activities (including on-site and off-site |
| | desludging). Safety hygiene for desludging operators is also important and need |
| | to provide training in near future. |
| Action points | All WASH actors agreed to follow desludging technical SOP (standard operation |
| | procedures) which are on-site or off-site desludging activities in KCA. |
| Topic 4: Diarrhoea c | ontrol and preventive measure in KCA-IDP camps |
| | |
| Summary of | Kachin WASH Cluster coordinator explained rate of diarrhoea incidences in KCA |
| discussion | since January to August 2017 which were received from local health department |
| | (Liaza) and update information was addressed diarrhoea control and preventive |
| | measure together with Kachin Health Cluster. HPA also participated in this |
| | diarrhoea control and preventive measure working group in Myitkyina. |
| Action points | Liaza based WASH actors agreed to participate diarrhoea control and preventive |
| | measure task force led by local health department. |
| Topic 5: Hygiene pract | tices improvement by using hygiene promotion activities in IDP camps |
| Summary of | WASH Cluster Coordinator presented hygiene practices (good hygiene |
| • | |
| discussion | practices) situation in IDP camps which was more tocusing on messages |
| discussion | practices) situation in IDP camps which was more focusing on messages |
