World Bank Group

Ukraine

Director of Operations

Ulrich Zachau

The eGovernment system in Myanmar is an important step towards implementing the Government’s strategy of creating an efficient and transparent e-government system. The Myanmar National Portal (MPT) is a key component of this e-government system and is currently under development.

The eGovernment system is being implemented by the MPT, which is a government-led initiative to create a single portal for all government services. The portal will provide citizens and businesses with a one-stop-shop for accessing government services, improving efficiency and reducing costs.

The eGovernment system is being developed with the support of the World Bank Group and other international partners. The project is expected to be completed by 2020.
