	Secondary road	km	0.5	174
	Local road	km	58	600

Unusual heavy monsoon rains have been affecting Myanmar since 16 July causing river overflows and floods. In the past few days, torrential rains damaged farmland, roads, rail tracks, bridges and houses. Reservoir are seasonal inundated areas and water bodies probably due to agricultural practices (paddy fields). The core users of the map is Emergency Response Coordination Centre (ERCC).

The present map shows the flood delineation in the area of Hinthada (MYANMAR). The basic topographic features are derived from public datasets, refined by means of visual interpretation of pre-event image Landsat-8.

The thematic layer, assessing the delineation of the event, has been derived from post-event image. Pedagget 2.

All satellite images have been radiometrically enhanced, orthocorrected with RPC approach (using SRTM elevation data). The estimated geometric accuracy of this product is 50 m CE90 or better, from native positional accuracy of the background satellite image.

The estimated thematic accuracy of this product is 85 % or better, based on previous experience in using high-resolution SAR for flood extent delineation. Please be aware that the thematic accuracy might be lower in urban and forested areas due to known limitations of the

Only the area enclosed by the Area of Interest has been analyzed.

Map produced by SIRS under contract 259736 with the European Union. Name of the release inspector (quality control): SERTIT (ODO). E-mail: rapidmapping@ems-copernicus.eu
