

Launch of RCCE Kits in Myanmar

9 May 2024

Background

During or after the disasters, there is **“no time”** to develop the messages and share in a timely manner.

Particularly in the monsoon season, the road blockage and mobile/internet connectivity challenges **hindered the access to health information.**

Hence, healthworkers and community volunteers who play the critical role in **communicating the risks** need to be equipped with the knowledge and information in prevention, preparedness and response to health emergencies in order to build **community resilience.**

Objectives of RCCE kits

To meet different community information needs in humanitarian emergencies and disasters.

**To provide reliable and effective
“quick health tips” at the
community mobile clinics**

**To create an information ecosystem
between community healthworkers
volunteers and the marginalized population**
