Hospital Statistics Report

2014-16

Health Information Division, Department of Public Health

in collaboration with

Department of Medical Services

Nay Pyi Taw

June 2018

PREFACE

Hospital Statistics Report (2014-2016) is the collaborative effort of Health Information Division, Department of Public Health and Department of Medical Services. It is based on the monthly statistical returns from all public hospitals under the Ministry of Health and Sports and the registered private hospitals. Most of the hospital returns were paper-based during 2014-16, although some large hospitals reported by using computer assisted medical record system.

This report provides a broad range of statistics and information about patterns of hospital utilization in terms of bed occupancy rate, average number of inpatients and outpatients per day, institutional mortality rate, morbidity and mortality statistics. Information on communicable diseases, common non-communicable diseases and injuries are also included.

In this report, hospital efficiency is assessed by applying the Pabón Lasso technique which uses the three indicators; bed occupancy rate, average turnover of patients per bed per year and average length of stay concurrently in assessing the relative performance of hospitals. In addition, information about the hospitals with good performance during these three consecutive years is presented to provide information to the decision makers of hospital care services.

The information will be useful for monitoring and assessing health service utilization, performance measurement and evidence-based decision making for health care management and allocation of resources. This report is expected to be used by policymakers and program managers of health care services to evaluate their performance and to formulate appropriate health policies and programs.

This report cannot come into reality without the strong technical leadership and earnest effort of Dr Thet Thet Mu, Deputy Director-General, and her Health Information Division staff, medical record technicians, medical officers in-charge, nurses and staff working in various categories of public as well as private hospitals and their contribution are highly appreciated.

INTRODUCTION

Health Information Division, Department of Health planning, has taken the responsibility for the collection, processing, analyzing and interpretation of hospital and public health data of Myanmar from 1995 to March 2015. From April 2015 onwards, the Division has been under the Department of Public Health but still taken care of public health and hospital information system. This Hospital Statistics Reports is the collaborative effort of Health Information Division, Department of Public Health, the public hospitals under the Department of Medical Services and registered private hospitals. This report will be published and distributed to be used for planning and managing hospital performance. It is also available online at www.mohs.gov.mm.

Reporting Forms and Data Items

All the public hospitals in Myanmar are reporting their inpatient data which are specified in revised “Hospital Form Manual” released in August 2012 by using the following standardized Hospital Report forms:

- Form I -Monthly Hospital Return (Administrative)
- Form II-Monthly General Inpatient Summary
- Form III-Hospital Daily Record (In-patient).

Part C of Form I -Monthly Hospital Return (Administrative) is used to report outpatient activities of the hospitals. Outpatient summary are reported with outpatient report form of which data items are specified in Outpatient Report Manual released in May 2008.

Regarding private health sector, training on hospital statistics and medical record management was conducted in Yangon; for private hospitals of lower Myanmar, and in Mandalay; for those of upper Myanmar during 2013 in collaboration with Myanmar Private Hospital Association. The reporting format and data items are defined in “Private Hospital Form Manual” released in January 2013. Two reporting forms used in private hospitals are

- Form I -Monthly Hospital Return (Administrative) and
- Form II-Monthly General Inpatient Summary.

Data Providers

This report includes information of the public hospitals reported to Health Information Division; most of them are under administration of the Ministry of Health and Sports and a few hospitals are under other Ministries. Different types of public hospitals categorized according to the bed strengths and service delivery pattern are major providers of hospital statistics. It includes specialist hospitals, general hospitals, 150- bedded, 100 bedded, 50 bedded, 25 bedded, 16 bedded and station hospitals.

Registered private hospitals have been providing data since January 2013. Information of private hospitals is also included in the report.

Information

This report organizes hospital statistics from routine service reporting system of all public hospitals, including from Station Hospitals to tertiary Hospitals, and contains information on

- Reporting status of the hospitals
- Availability and utilization of hospital services
- Availability and utilization of hospital resources
- Hospital performance indicators
- Patient care services such as
 - Outpatient services
 - Surgical services
 - Obstetric services
- Hospital death rate
- Graphical presentation of morbidity and mortality statistics
- Causes of hospitalization by Region and State
- Information of the private hospitals

The statistics in this report are organized by States and Regions in which the hospitals are situated, not by the States and Regions of usual residence of the patients. Therefore, the statistics of State and Region does not represent disease pattern of population in catchment area.

Although some of the large hospitals reported their data electronically, the reporting system is paper-based for year 2014-16. Therefore, timeliness and response rate of the hospitals are varied across the States and Regions. In addition, the response rate is affected by some hospitals which are not under the administration of Ministry of Health and Sports.

All administrative data of the public hospitals are compiled from Hospital Form I and III. Eight hospital administrative indicators are used to evaluate the performance and utilization of the public hospitals. This report also describes distribution and trends of availability of hospital resources among different Regions and States to provide current situation of hospital services.

Assessment on efficiency of the public hospitals under Ministry of Health and Sports by the Pabón Lasso technique is also included. Previously, percentage of bed occupancy based on sanctioned bed was used as indicator for assessing hospital utilization. However, unnecessarily prolonged stay, development of nosocomial complication, improper patient care and lack of facility for proper patient care may lead to prolong length of stay with relatively high bed occupancy. To avoid such misleading information from any particular indicator, three indicators; bed occupancy rate, bed turnover ratio or average turnover of patients per bed per year and average length of Stay, have been used simultaneously according to Pabón Lasso Technique since 2012 hospital statistics report. In this report, it is applied to all public hospitals under MOHS as well as to each type of hospitals by using specific indicators accordingly.

In addition, the hospitals which had at least 90% bed occupancy rate during 2014-16 are extracted from the desirable zone (Quadrant III of the Pabón Lasso graph) and stated with tabular presentation to provide information for planning and management of hospital resources.

Morbidity and mortality statistics of all inpatients are processed from Hospital Form II by applying single condition morbidity analysis in accordance with Guidelines and Rules for morbidity and mortality coding. Therefore there may be loss of some information relating to the occurrence of the disease problems.

Morbidity and mortality statistics are not based on the actual number of patients, but on the episode or frequency of hospitalization. Therefore it is recommended to take precaution in interpretation of disease volume.

This report includes morbidity and mortality pattern of all inpatients, leading causes of hospitalization or morbidity and that of mortality. Morbidity by specific target age group such as neonate, infant, under-five, adolescent and elderly are also described. Percent distribution and proportion of leading causes among the specific disease group are also presented to highlight the burden of specific diseases among the hospitalized patients and provide information for effective management and planning.

SECTION I

HOSPITAL ADMINISTRATIVE STATISTICS

RESPONSE RATE OF HOSPITALS

PART A

All public hospitals under Ministry of Health and Sports and other ministries are reporting the administrative statistics to Health Information Division under the Department of Health Planning since 1995. After the Department of Health Planning was abolished on 31st March 2015, Health Information Division has been functioning under the Department of Public Health.

Information regarding response rate of the public hospitals from 2007 to 2016 are described in Table (1). It includes number of hospitals reported for the specific number of months in each year, total number of public hospitals and union response rate.

Table (1) Reporting Status of the Public Hospitals by the Number of Months Reported (2007-2016)

| Year | Number of hospitals by months reported | | | | | | | | Total hospitals | Union response rate (%) | | |
|------|--|------|-------------|------|------------|------|---------|------|-----------------|-------------------------|--|--|
| | 12 Months | | 6-11 Months | | 1-5 Months | | 0-Month | | | | | |
| | No. | % | No. | % | No. | % | No. | % | | | | |
| 2007 | 645 | 77.5 | 128 | 15.4 | 11 | 1.3 | 48 | 5.8 | 832 | 90.6 | | |
| 2008 | 714 | 84.4 | 63 | 7.4 | 8 | 0.9 | 61 | 7.2 | 846 | 90.7 | | |
| 2009 | 722 | 82.9 | 62 | 7.1 | 8 | 0.9 | 79 | 9.1 | 871 | 89.1 | | |
| 2010 | 721 | 80.2 | 85 | 9.4 | 13 | 1.4 | 79 | 8.8 | 898 | 88.4 | | |
| 2011 | 729 | 78.9 | 85 | 9.2 | 15 | 1.6 | 95 | 10.3 | 924 | 86.9 | | |
| 2012 | 651 | 68.9 | 182 | 19.3 | 16 | 1.7 | 96 | 10.2 | 945 | 85.8 | | |
| 2013 | 684 | 70.5 | 166 | 17.1 | 21 | 2.1 | 98 | 10.1 | 969 | 85.7 | | |
| 2014 | 664 | 68.1 | 223 | 22.9 | 21 | 2.2 | 67 | 6.9 | 975 | 88.1 | | |
| 2015 | 404 | 38.3 | 444 | 42.1 | 69 | 6.5 | 137 | 13.0 | 1,054 | 75.7 | | |
| 2016 | 485 | 43.5 | 340 | 30.5 | 141 | 12.6 | 149 | 14.9 | 1,115 | 71.8 | | |

Overall reporting status from 2007 to 2016 was shown in figure (1) in comparison with full 12-months response rate and non-response rate against the increasing number of public hospitals. The overall response rate was found gradually decreased since 2007. The lowest response rate was found in 2015 and 2016, 75.7% and 71.8% respectively.

Figure (1) Response Rate of Public Hospitals for Union (2007- 2016)

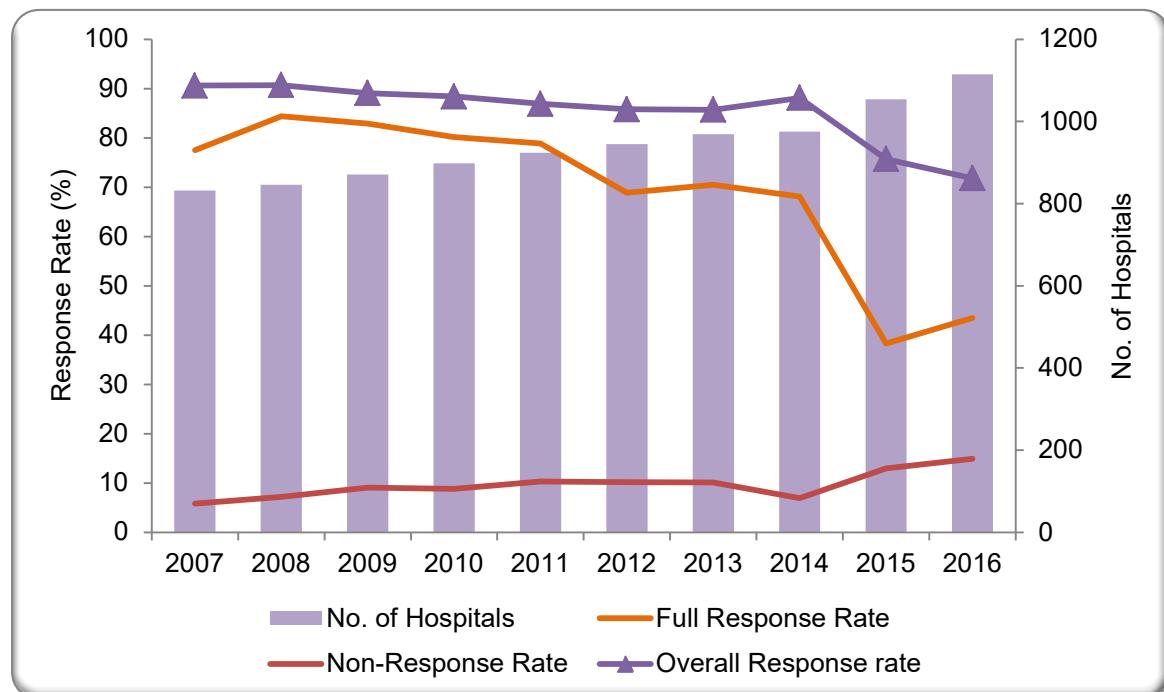

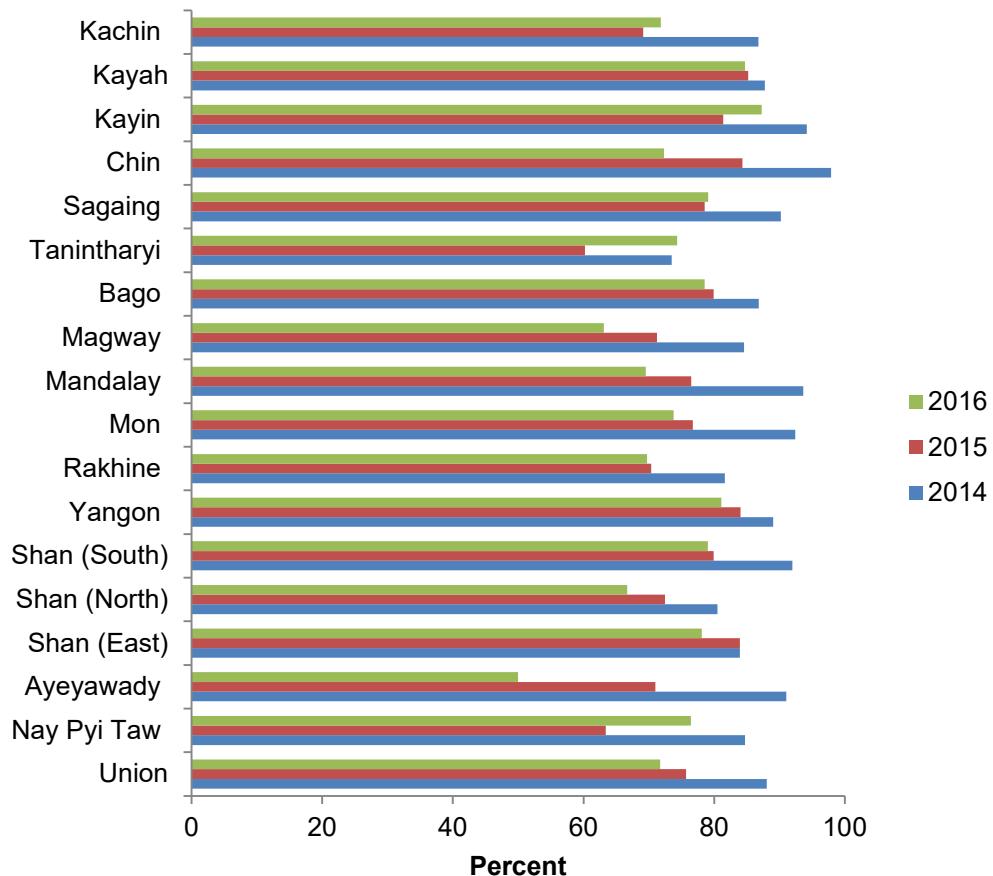

Figure (2) Response Rate of Public Hospitals by Regions and States (2014-2016)

Response rate by public hospitals of each Region and State are described in Figure (2). Almost all Regions and States have lower response rate in 2015 and 2016 compared to 2014.

2014. Significant fall in response rate is found in Ayeyawady Region followed by Chin State and Mandalay Region.

In Tanintharyi, overall response rate increased again in 2016 although there was a fall in 2015. Response rate of Nay Pyi Taw, Kayin and Kachin also moved up but not reached the level of 2014.

Response rates of the public hospitals were described in details in Table (2).

Table (2) Response Rate of Public Hospitals by Region and State (2014-2016)

| Region and State | Number of hospitals by months reported | | | | | | | | | | | | | | | | | | |
|---------------------|--|------|------|-------------|------|------|------------|------|------|---------|------|------|-----------------|------|------|---------------------------|------|------|--|

| Nay Pyi Taw | 55.6 | 34.8 | 39.1 | 33.3 | 30.4 | 43.5 | 0.0 | 21.7 | 4.3 | 11.1 | 13.0 | 13.0 | 18 | 23 | 23 | 84.7 | 63.4 | 76.4 | |

Note: response rate may be affected by the hospitals which are not under the administration of Ministry of Health and Sports such as some hospitals under other ministries and some from Shan (North).

$$\text{Overall response rate} = \frac{\sum_{i=1}^{12} n_i \times 100}{(\text{Total number of hospitals} \times 12 \text{ months})}$$

n= Number of reporting months × Number of hospitals

HOSPITAL SERVICES

PART B

This chapter describes overview of hospital services including number and types of hospitals, availability of sanctioned and available beds and utilization of hospital services.

Table (3) Hospital Service Indicators for Union (2007-2016)

| Sr. No. | Hospital Services Indicators | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---------|--|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| 1 | Number of hospitals | 832 | 846 | 871 | 898 | 924 | 945 | 969 | 975 | 1054 | 1115 |
| 2 | Number of sanctioned beds | 35967 | 38363 | 39060 | 40913 | 41804 | 42569 | 44046 | 44133 | 46060 | 53188 |
| 3 | Number of available beds as of 31 st December | 43288 | 43748 | 44255 | 45904 | 45346 | 45040 | 48035 | 48737 | 51487 | 55895 |
| 4 | Number of admissions [,000] | 1084 | 1107 | 1212 | 1340 | 1324 | 1530 | 1793 | 2095 | 2562 | 2754 |
| 5 | Number of discharges and deaths [,000] | 1082 | 1107 | 1208 | 1312 | 1322 | 1520 | 1785 | 2085 | 2550 | 2745 |
| 6 | Number of deaths [,000] | 28 | 27 | 28 | 30 | 28 | 31 | 32 | 35 | 38 | 42 |
| 7 | Number of patient days [,000] | 7007 | 6939 | 7498 | 7952 | 7842 | 8651 | 9878 | 11254 | 13278 | 13923 |
| 8 | Number of out-patient attendances [,000] | 2949 | 3242 | 3381 | 3627 | 3660 | 4166 | 5519 | 7318 | 9301 | 10190 |
| 9 | Number of deliveries [,000] | 125 | 135 | 147 | 165 | 178 | 202 | 237 | 282 | 349 | 391 |
| 10 | Number of surgical operations [,000] | 248 | 266 | 277 | 309 | 338 | 380 | 432 | 504 | 585 | 646 |
| 11 | Percent of bed occupancy based on available beds | 44 | 44 | 46 | 47 | 47 | 53 | 56 | 63 | 71 | 68 |
| 12 | Percent of bed occupancy based on sanctioned beds | 53 | 50 | 53 | 53 | 51 | 56 | 61 | 70 | 79 | 72 |
| 13 | Average number of inpatients per day [,000] | 19 | 19 | 21 | 22 | 21 | 24 | 27 | 31 | 36 | 38 |
| 14 | Average number of outpatients per day [,000]* | 12 | 13 | 14 | 15 | 15 | 17 | 23 | 30 | 38 | 42 |
| 15 | Average duration of stay [in days] | 6.4 | 6.3 | 6.2 | 6 | 5.9 | 5.6 | 5.5 | 5.4 | 5.2 | 5.1 |
| 16 | Average turnover of patients per bed per year | 25 | 25 | 27 | 29 | 29 | 34 | 37 | 43 | 50 | 49 |
| 17 | Average turnover interval [in days] | 8.1 | 8.2 | 7.2 | 6.7 | 6.5 | 5.1 | 4.3 | 3.1 | 2.2 | 2.4 |
| 18 | Hospital death rate (%) | 2.6 | 2.5 | 2.3 | 2.3 | 2.1 | 2 | 1.8 | 1.7 | 1.5 | 1.5 |

Note:-[*] per working days of hospital

Figure (3) Trend of Hospital Resources for Union (2007-2016)

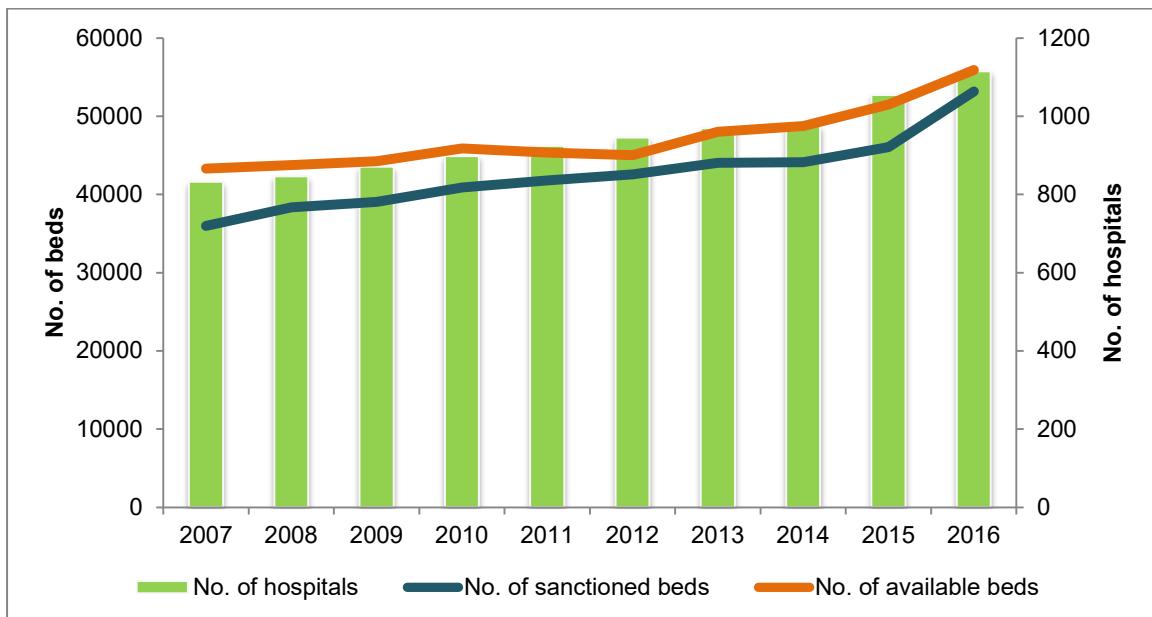

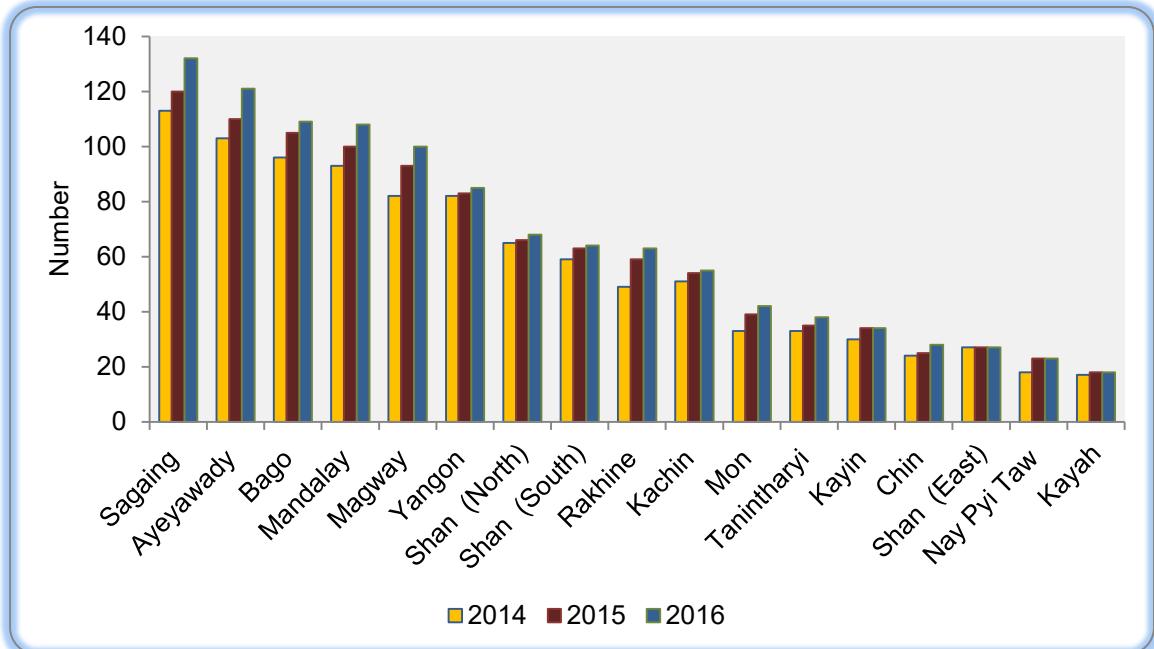

Figure (3) shows hospital resources for Union from 2007 to 2016. Numbers of hospitals were in increasing trend. Number of sanctioned bed and available beds were also increasing.

Figure (4) Distribution of Hospitals across Regions and States (2014-2016)

In Myanmar, hospitals are distributed based on geographic situation and population. Distribution of hospitals across Regions and States are stated in Figure (4). Sagaing Region has the highest number of hospitals and Kayah has the lowest number.

Figure (5) Distribution of Types of Hospitals by Regions and States (2016)

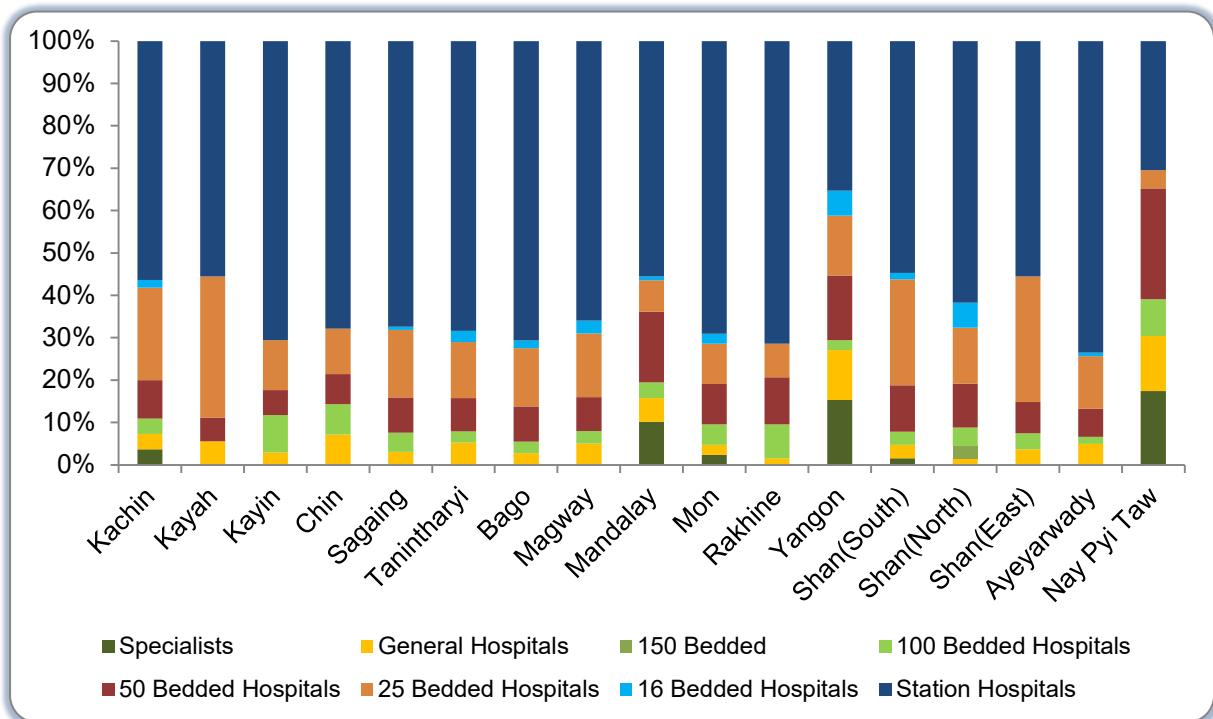

Figure (5) illustrates distribution of types of hospital in each Region and State. In most of the Regions and States except Yangon and Nay Pyi Taw, Station hospitals were more than half of all public hospitals.

Out of 1115 public hospitals providing hospital care services in Myanmar in 2016, Station Hospitals occupied the highest proportion (62.2%), followed by 25 bedded and 50 bedded hospitals. Specialist Hospitals and General Hospitals accounted for 2.9% and 4.6% respectively (Figure. 6).

Figure (6) Percent Distribution of Types of Hospitals (2016)

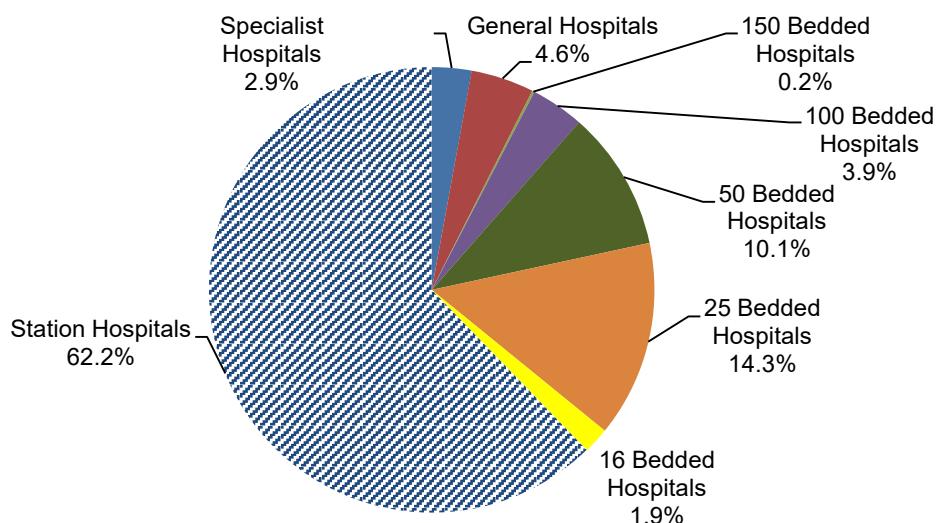

Figure (7) Distribution of sanctioned beds and available beds by Regions and States (2016)

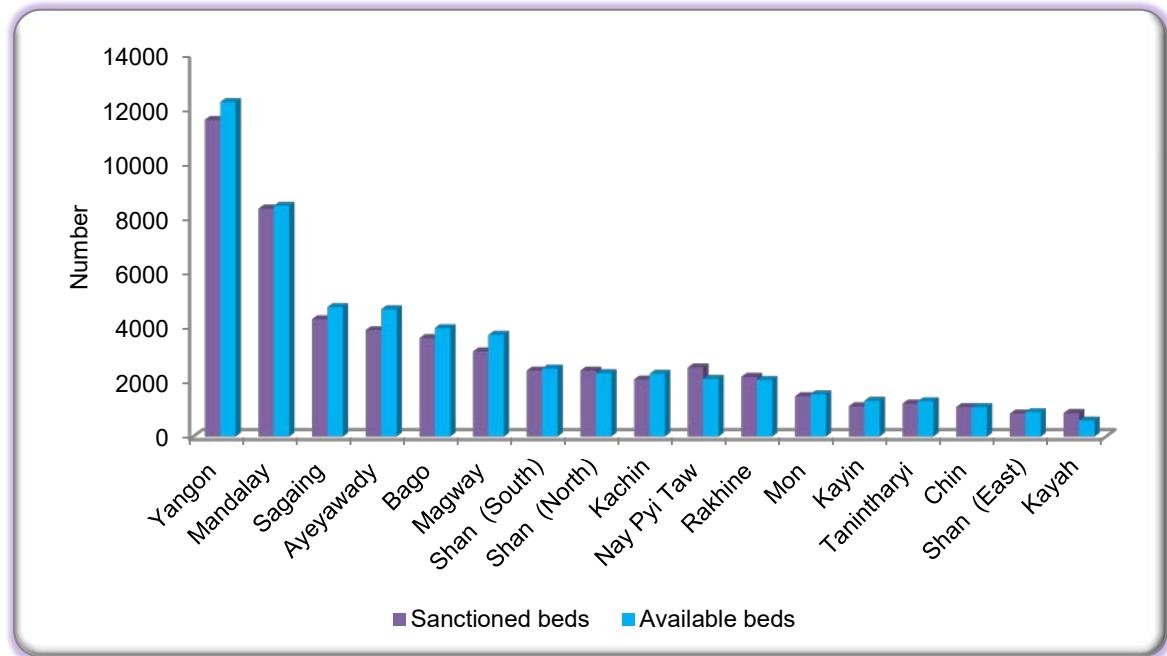

Figure (7) presents distribution of hospital resources in terms of sanctioned and available beds in different Regions and States. Available beds were found to be more than sanctioned beds in most of the Regions and States.

Table (4-1) Availability and Utilization of hospital resources by Regions and States (2014)

| Sr. No. | Regions & States | Total number of hospitals | Sanctioned beds | Available beds | Admissions | Discharges & Deaths | Patient days | Number of deaths | Hospital death rate | Out-patient attendances |

Figure (8) Trends of Bed Occupancy Rate (2007-2016)

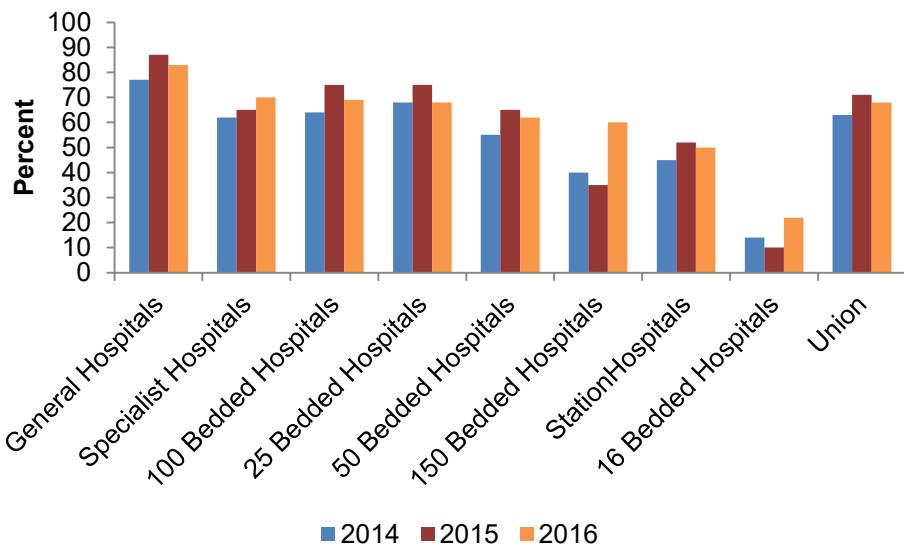

Above figure illustrates the utilization of public hospitals in terms of bed occupancy rate from year 2007 to 2016. In 2016, 72% of sanctioned beds and 68% of available beds were utilized and utilization was found lower than 2015. However, it should be noted that bed occupancy rates are changing based on number of beds. When hospitals are upgraded, numbers of beds are increased and bed occupancy might be lower.

Figure (9) Bed Occupancy Rate by Regions and States (2016)

Utilization of beds in each Region and State are described in Figure (9). Ayeyawady has the highest bed occupancy rate based on sanctioned beds followed by Tanintharyi, Magway and Mon. Chin has the lowest bed occupancy rate.

**Figure (10) Bed Occupancy Rate based on available beds by Type of Hospitals
(2014- 2016)**

**Figure (11) Bed Occupancy Rate based on sanctioned beds by Type of Hospitals
(2014- 2016)**

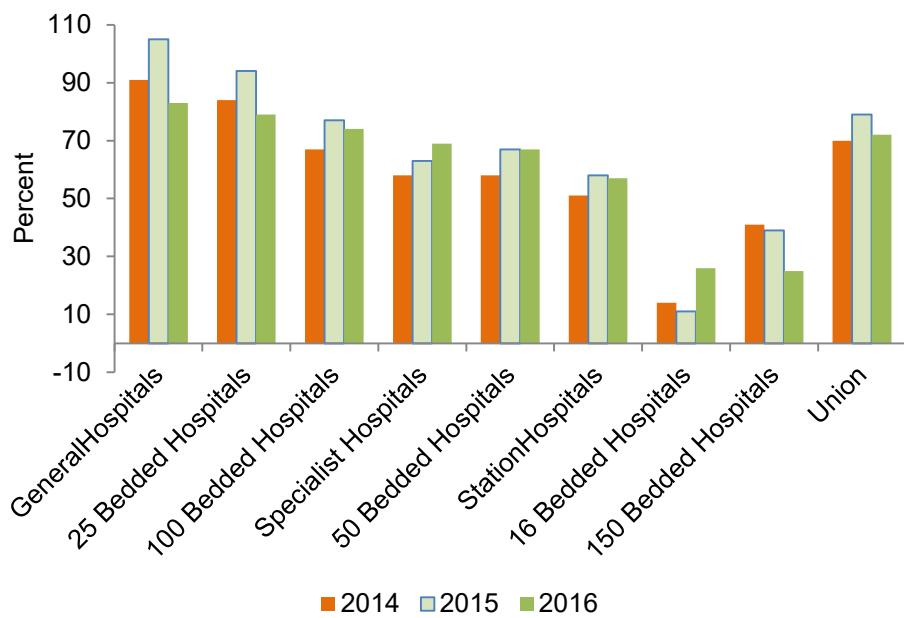

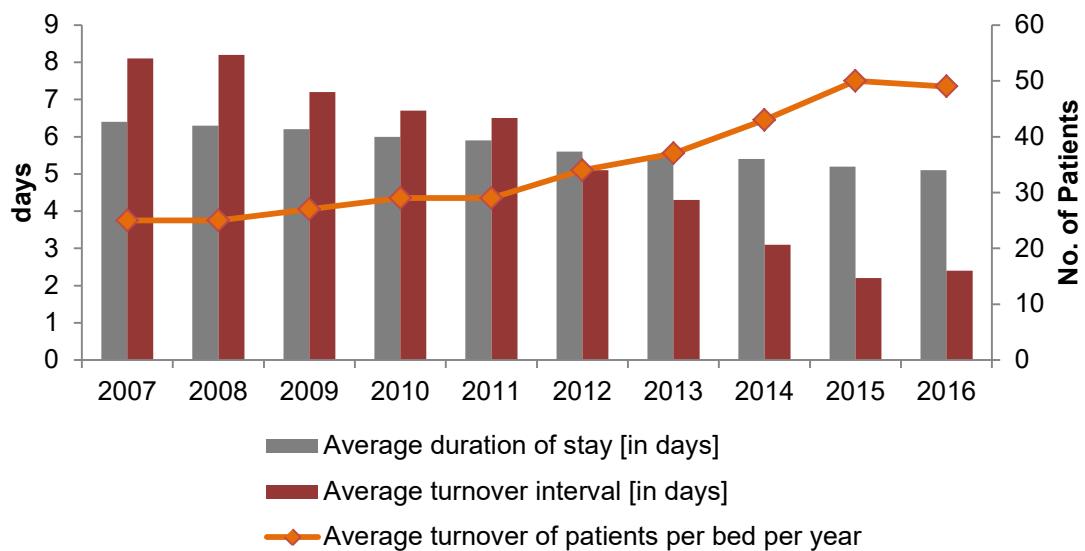

Figure (10) and (11) describes the bed occupancy rates based on available beds and sanctioned beds in each type of hospitals during 2014 to 2016. General hospitals are found more utilized than other types of hospitals and bed occupancy rate of general hospitals based on sanctioned beds was higher than 100% in 2015.

Figure (12) Trends of Hospital Performance (2007-2016)

Bed occupancy rate, average duration of stays and average turnover interval are regarded as hospital performance indicators in most hospital care setting. In addition to these indicators, average turnover interval is also regarded as hospital performance indicators.

Therefore, hospital performance during 2007 to 2016 is shown with average duration of stay, average turnover interval and average turnover of patient per bed per year. Average duration of stay and average turnover intervals are decreasing trends. Approximately fifty patients were admitted and discharged per bed per year during 2015 and 2016. The upward trend of the indicator is found during the last decade (Figure. 12).

Hospital performance of various types of the public hospitals during 2014-2016 was illustrated in the following figures. Average turnover of patients per bed per year was highest in 25 bedded hospitals followed by general hospitals, 100 bedded and 50 bedded hospitals (Figure .13). Average turnover interval is the shortest in General hospitals (Figure. 14). Specialist hospitals have the longest duration of stay, on average, around 10 days. The duration of stay in other types of hospitals are approximately 4 days (Figure. 15).

**Figure (13) Average turnover of patients per bed per year by Types of Hospitals
(2014-2016)**

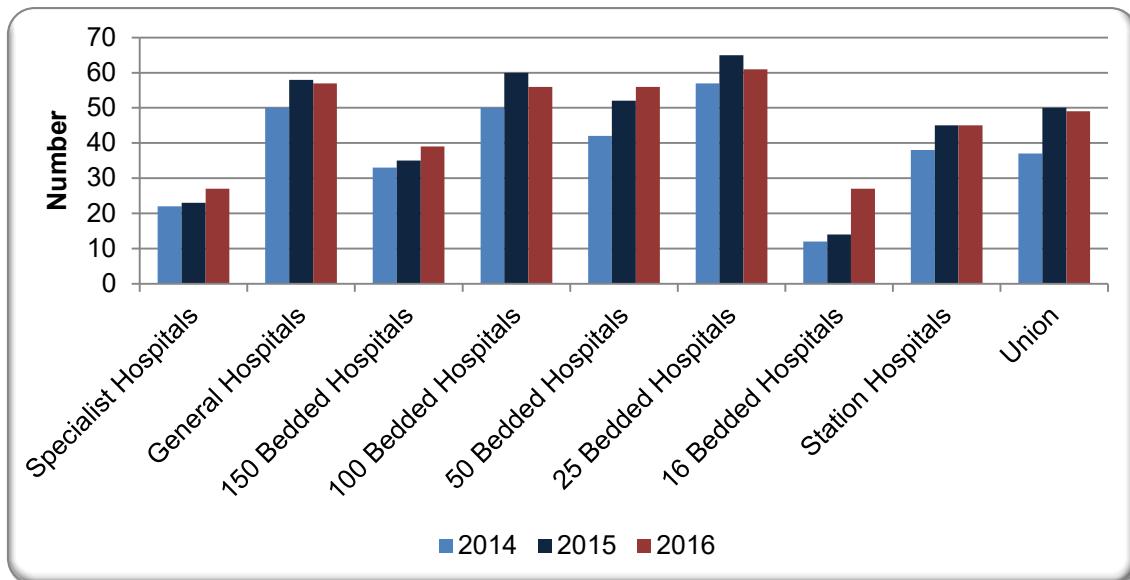

Figure (14) Average turnover interval by Types of Hospitals (2014-2016)

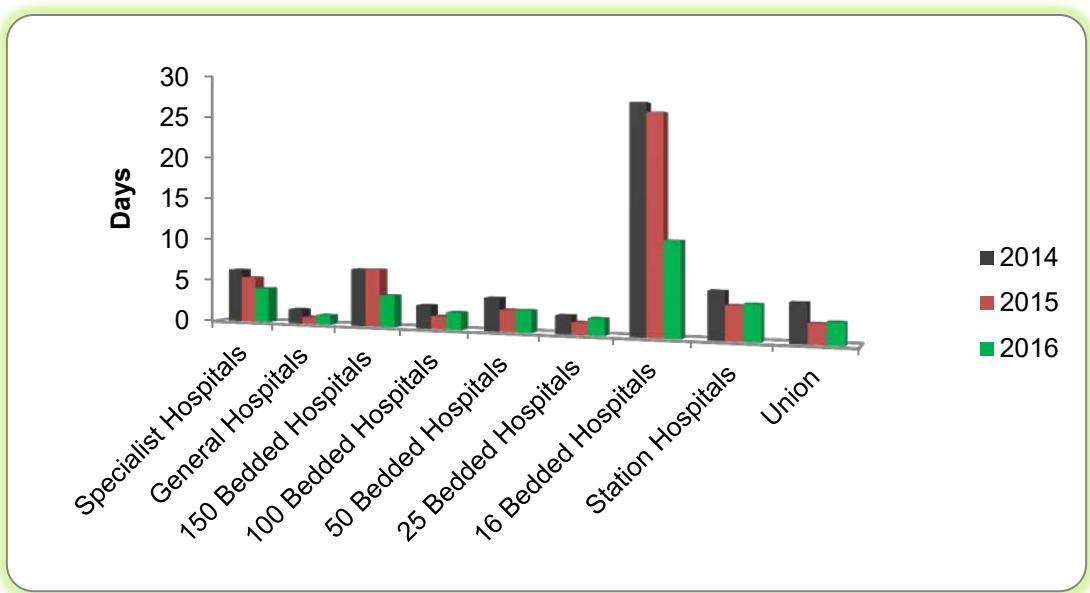

Figure (15) Average duration of Stay by Types of Hospitals (2014-2016)

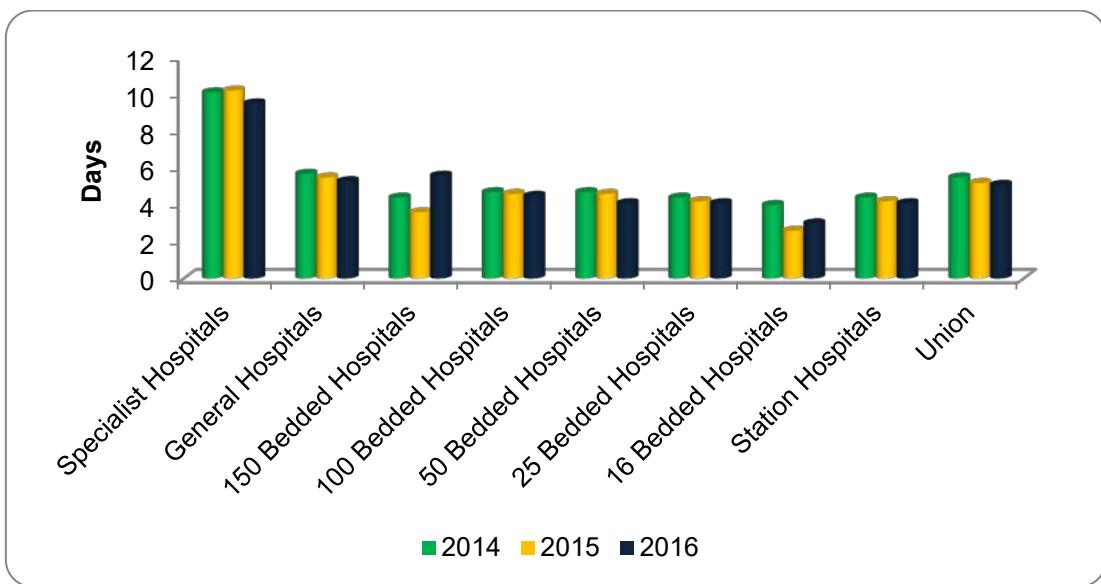

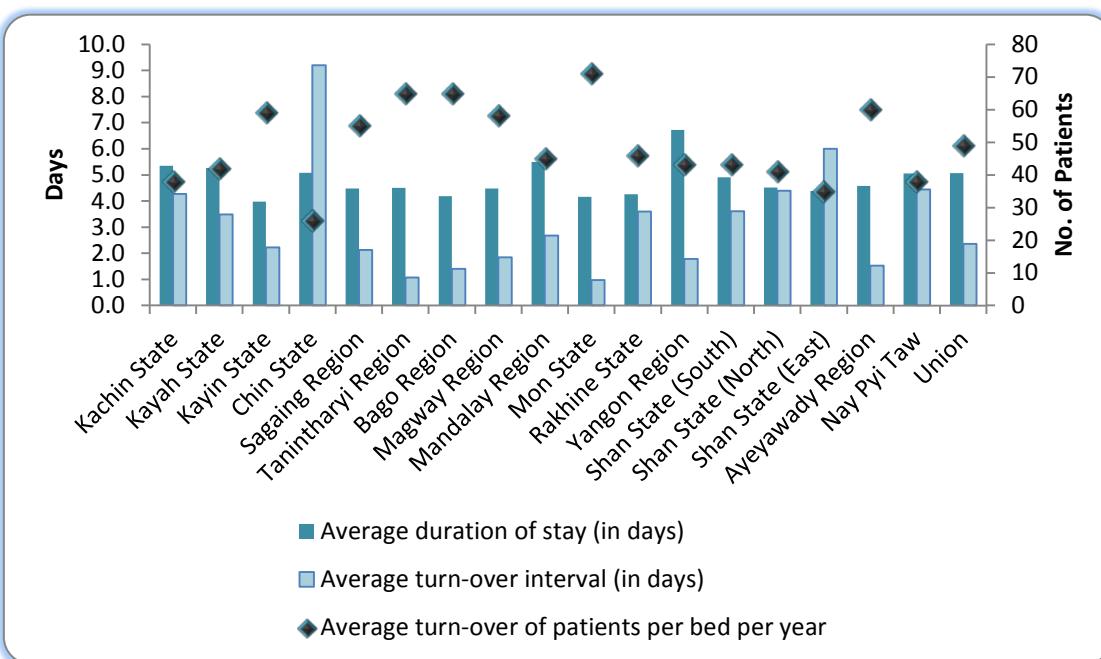

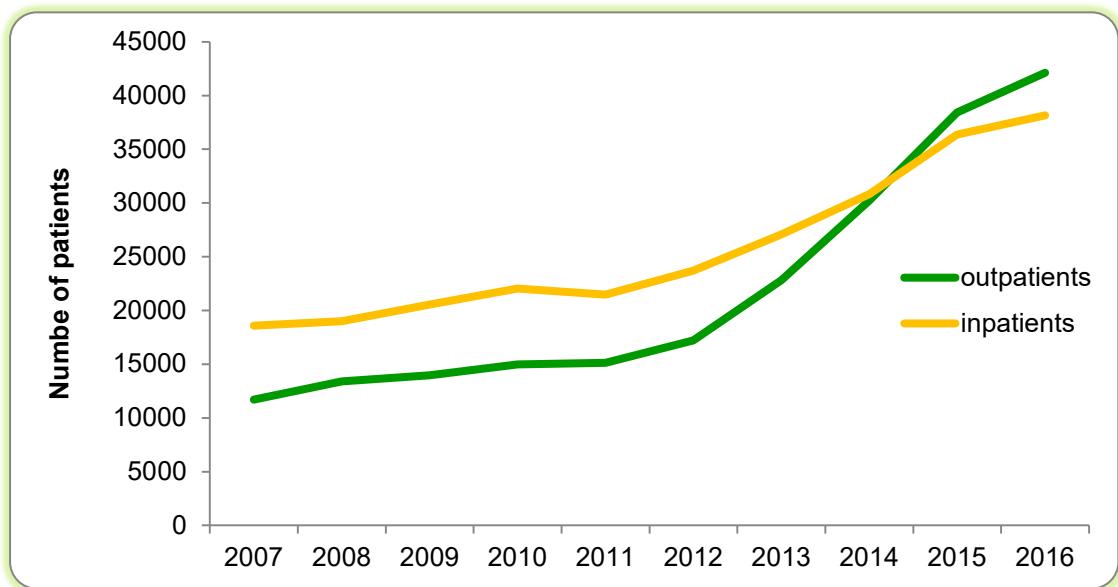

Figure (16) Hospital Performance by Regions and States (2016)

According to the three indicators illustrated in the above figure, Mon State has the highest turnover of patients per bed and the shorter turnover interval and duration of stay. It is followed by Tanintharyi and Bago.

Figure (17) Utilization of Public Hospitals (Average No. of Inpatients & Outpatients per Day) (2007-2016)

Average number of inpatients and outpatients per day is increasing trend during 2007 to 2016 and significant upward pattern is found during 2013 to 2016.

Figure (18) Utilization of Public Hospitals by Type of Hospitals (2016)

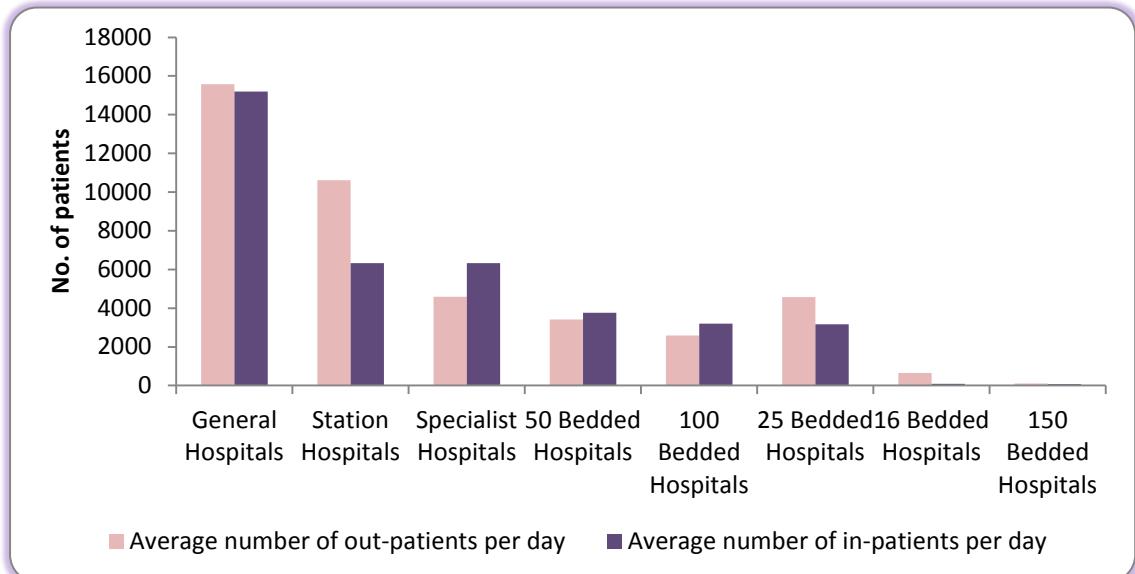

Figure (19) Utilization of Public Hospitals by Regions and States (2016)

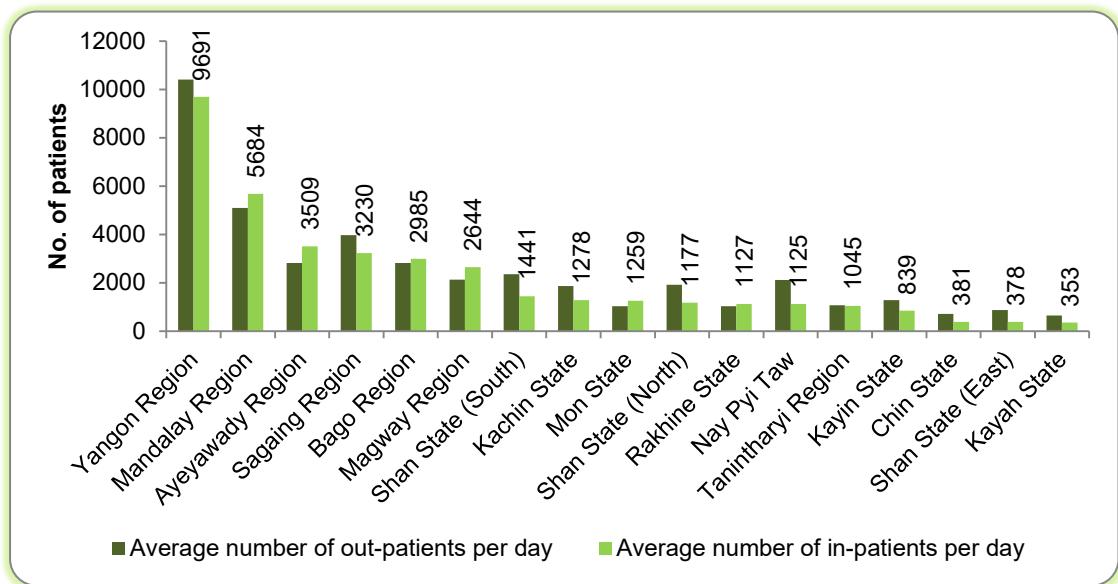

Figure (18) and (19) shows utilization of hospitals in terms of average number of inpatients and outpatients per day by types of hospital and by Regions and States. Average number of inpatients and outpatients are highest in Yangon followed by Mandalay and Ayeyawady.

Figure (20) Outpatient attendances by Regions and States (2014-2016)

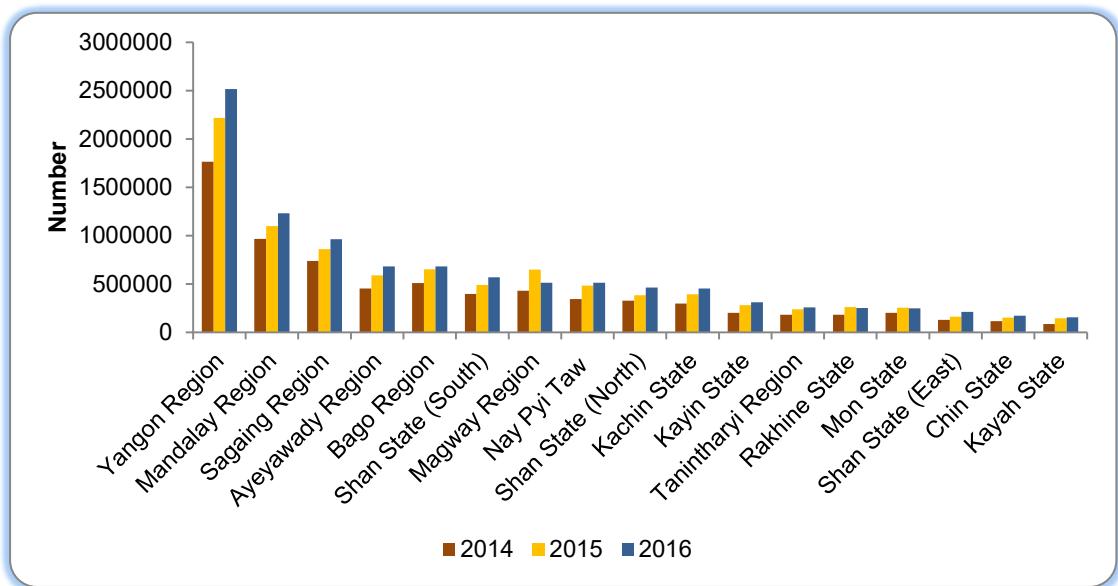

Figure (21) Outpatient attendances by Type of Hospitals (2014-2016)

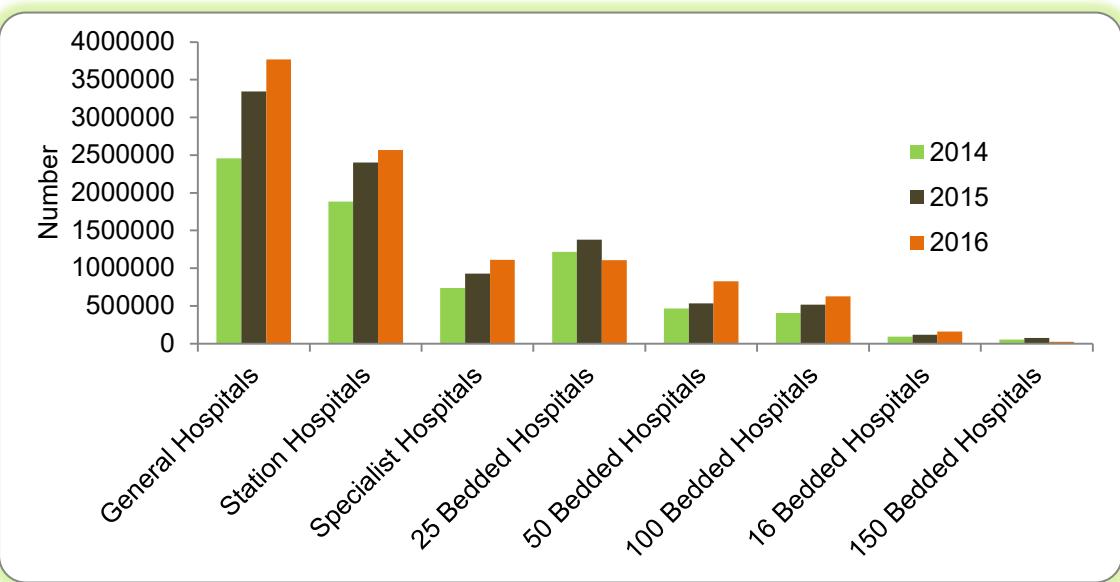

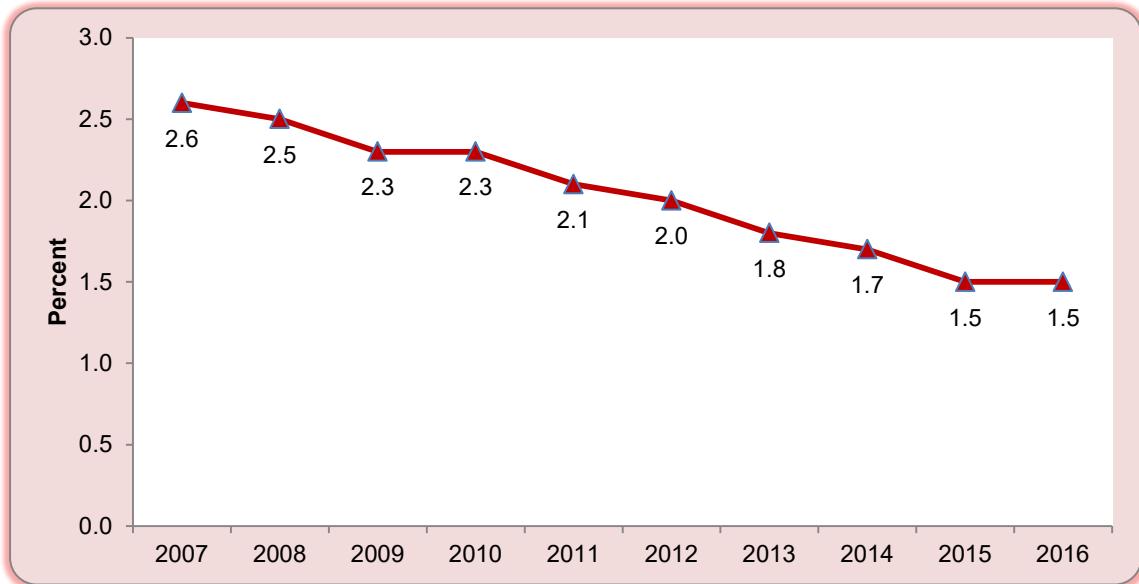

Figure (20) and (21) describes total number of outpatient attendances during three consecutive years (2014-2016).

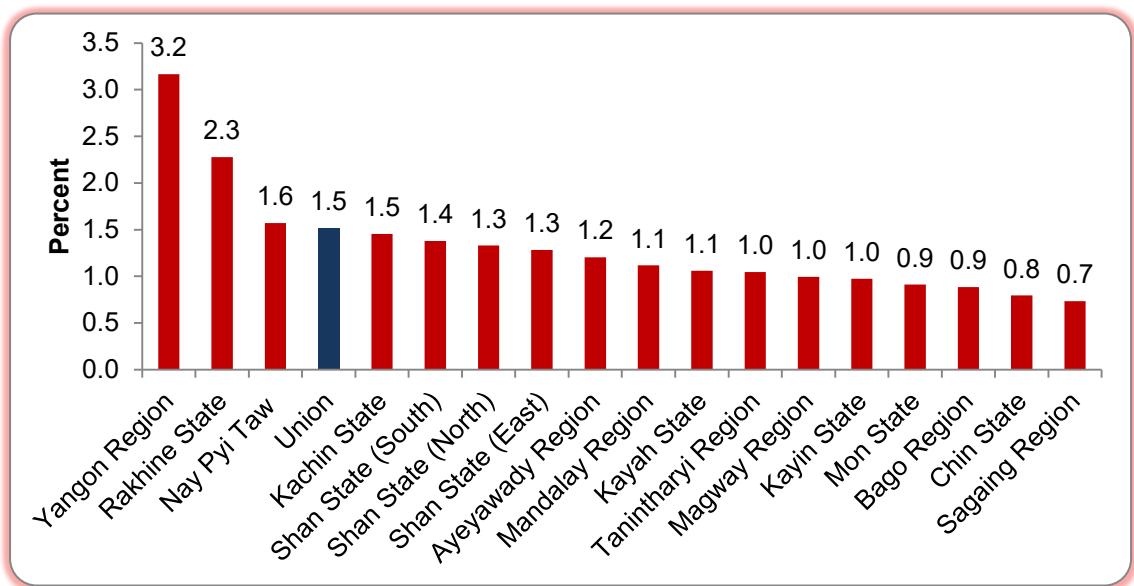

Figure (22) Hospital Death Rate (2007-2016)

Hospital death rate is calculated as percentage of total discharges and deaths. During 2007 to 2016, it was in decreasing trend and it was 2.6% in 2007 to 1.5% in 2016.

It was again described by Regions and State in Figure (23). Yangon has the highest hospital death rate (3.2%) followed by Rakhine (2.3%) and Nay Pyi Taw (1.6%).

Figure (23) Hospital Death Rate by Regions and States(2016)

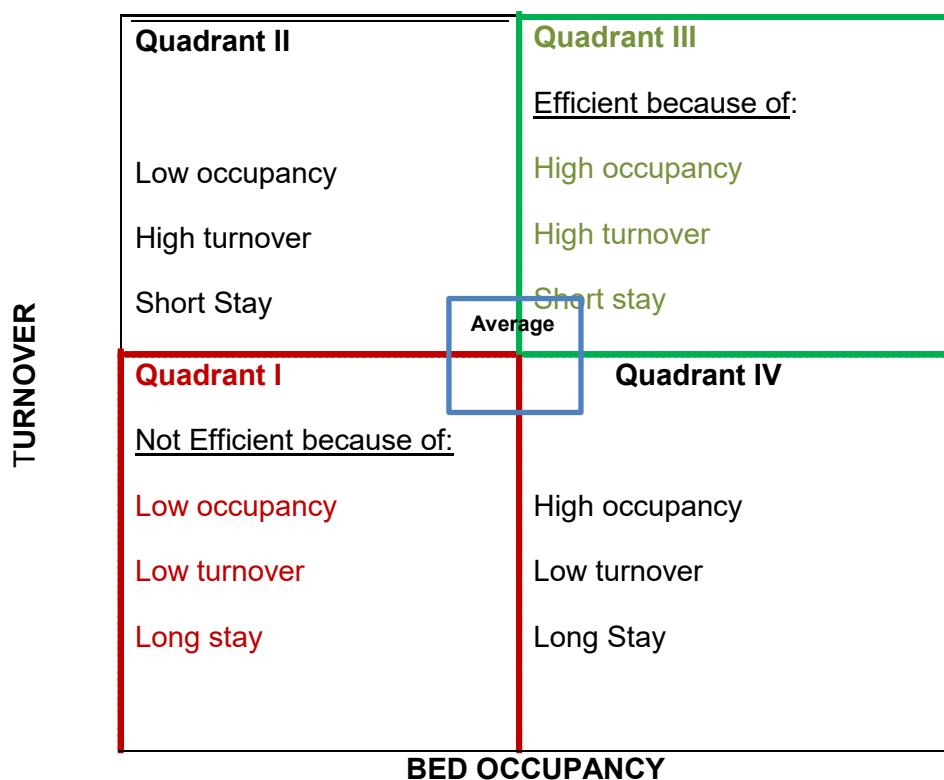

ASSESSMENT ON HOSPITAL EFFICIENCY WITH THE PABÓN LASSO TECHNIQUE

PART C

Hospital efficiency is analyzed by applying the Pabón Lasso technique. It is a graphical method that makes use of the three indicators; bed occupancy rate, average turnover of patients per bed per year and average length of stay concurrently in assessing the relative performance of hospitals.

In this method, the bed occupancy rate based on sanctioned bed (on the horizontal axis), is plotted against average turnover of patients per bed per year (on the vertical axis), with vertical and horizontal lines dividing the diagram into four regions. The horizontal and vertical demarcations represent the mean values of those indicators. According to the functional relationship of the three measures, any point on the graph represents the reciprocal of the average length of stay of the hospital under consideration. Figure (24) represents the possible features of hospitals located in each of the four regions.

Figure (24) Interpretation of efficiency according to Pabón Lasso*

*from Bamum and Kutzin

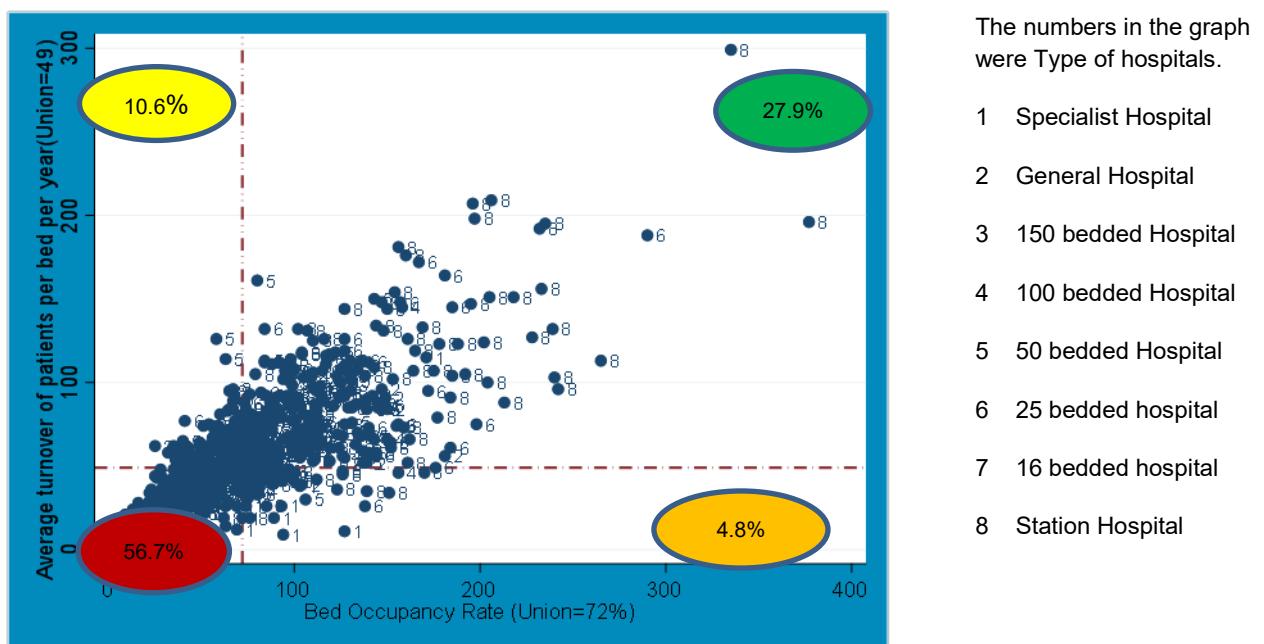

To assess the efficiency of all the public hospitals under Ministry of Health and Sports during 2014 -2016, union figures of bed occupancy rate based on sanctioned bed and average turnover of patients per bed per year were used as cut-off points for the Pabón Lasso graph. The number of hospitals used in this assessment excludes the hospitals under

other Ministries. The non-reporting hospitals under Ministry of Health and Sports are also included in this assessment.

As described in Figure (25), 304 hospitals were located in the desirable zone (Quadrant III), accounting for 27.9% of all hospitals under MOHS while 617 hospitals (56.7%) were in the Quadrant I representing poor performance of the hospitals.

Among 304 hospitals in the desirable zone of Pabón Lasso graph which have higher bed occupancy rate and average turnover of patients per bed per year than Union figures, some of the hospitals had utilized more than twice of their capacity in terms of sanctioned beds (Figure. 25).

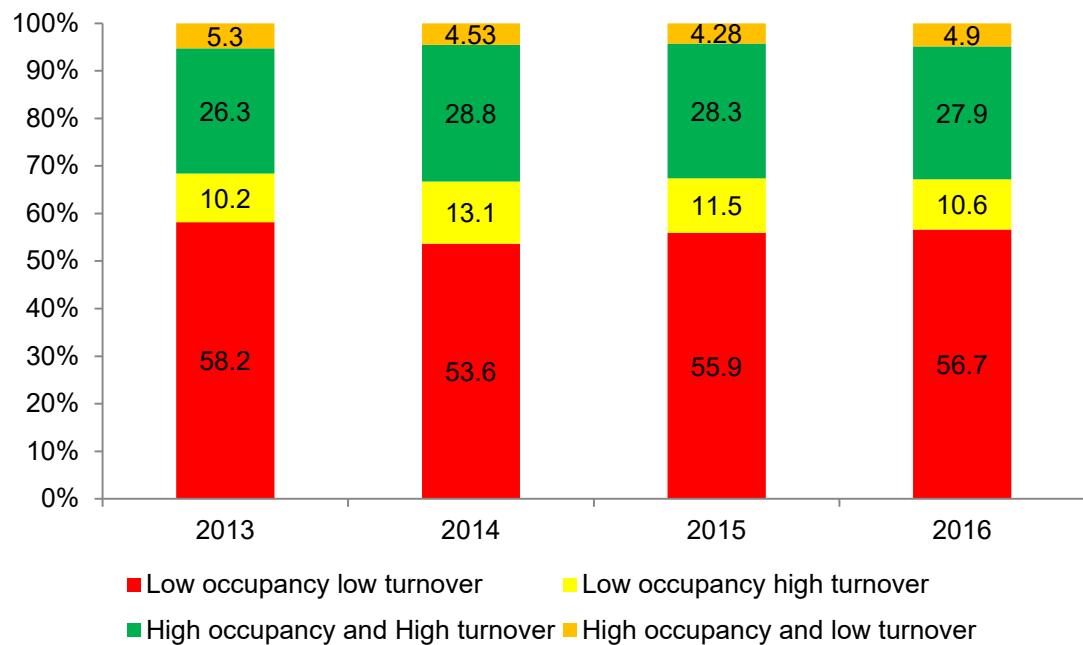

Figure (25) Pabón Lasso graph for all Public hospitals under Ministry of Health and Sports (2016)

Note; Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.
n = total number of all Hospitals under MOHS (1089 hospitals)

In order to visualize the performance of the public Hospitals under MOHS during 2013 to 2016, the data are analyzed with Pabón Lasso technique and the percent distributions in four quadrants are described in Figure (26).

Figure (26) Distribution of Hospital Performance according to Pabón Lasso technique (2013-2016)

The hospitals which had at least 90% bed occupancy rate were extracted from all hospitals of the desirable zone and it was found that 241 hospitals were using $\geq 90\%$ of the sanctioned beds. It also accounted for 23.5% of all the public hospitals under MOHS. The names of these hospitals were stated together with three hospital utilization indicators in Table (6).

Table (6) Hospitals in the desirable zone of Pabón Lasso graph which also had $\geq 90\%$ bed occupancy rate (2014-2016)

| | Name | Region and State | Bed Occupancy Rate(%) based on sanctioned bed | | | Average turnover of patients per bed per year | | | Average duration of Stay (in days) | | |

Figure (27) Pabón Lasso graph for all Specialists Hospitals under MOHS(2016)

Note: Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.

n = total number of Specialist Hospitals under MOHS

To assess efficiency of 32 specialist hospitals under MOHS, the lines of demarcation were bed occupancy rate (69%) and average turnover of patients per bed per year (about 27 patients) of all specialist hospitals under MOHS. According to the above figure, five hospitals (15.6% of all) were in Zone III of the model, indicating a satisfactory level of efficiency while 13 hospitals (40.6%) were in Zone I, having below-average level performance.

Figure (28) Distribution of Performance of Specialist Hospital according to Pabón Lasso technique (2013-2016)

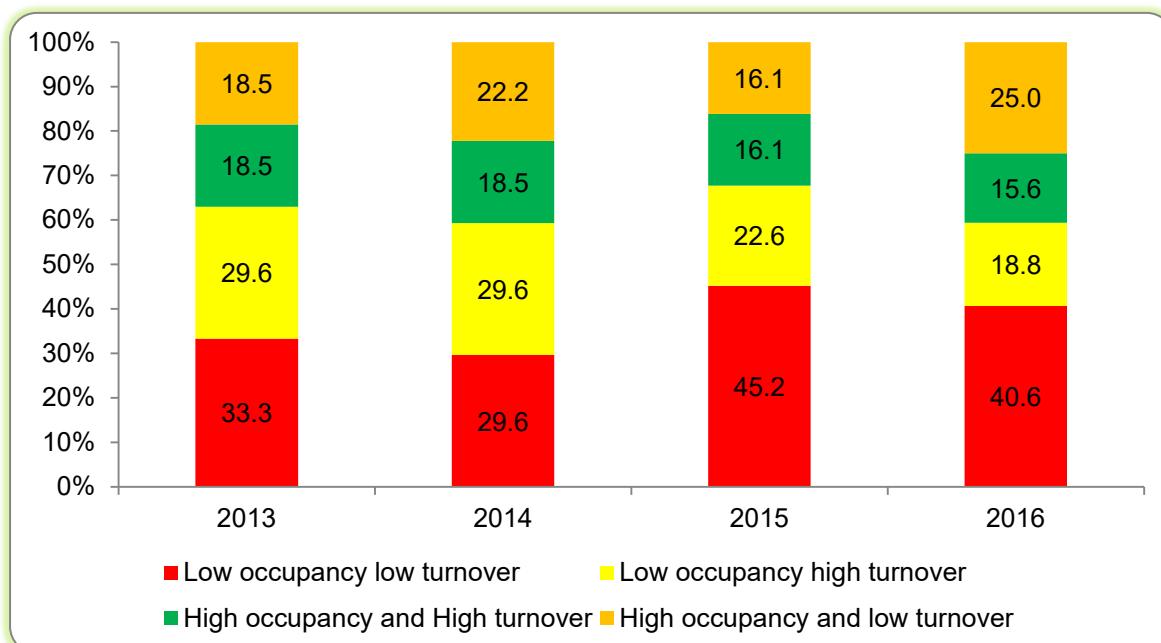

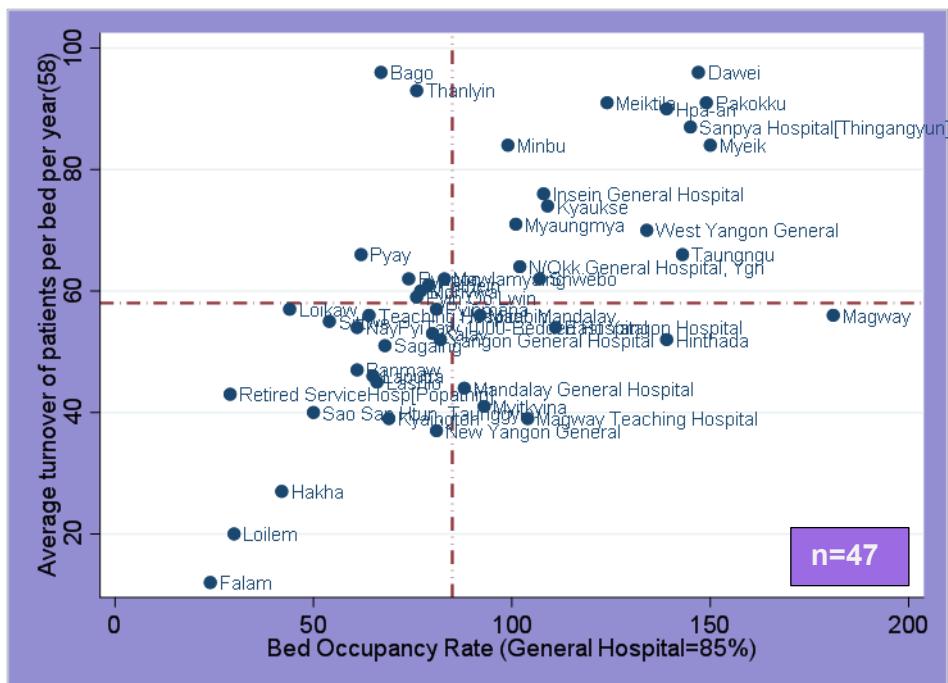

Figure (29) Pabón Lasso graph for all General Hospitals under MOHS (2016)

Note; Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.
n = total number of General Hospitals under MOHS

Regarding hospital utilization, all general hospitals under MOHS were utilizing 85% of their sanctioned beds in average and 58 patients were discharged from each bed during 2016. According to Figure (29), 17 hospitals (36%) have more than 100% bed occupancy rate based on sanction bed and 14 hospitals (30%) are in Zone III having the above average level of performance. Falam, Loilem and Hakha are situated in Zone I having the lowest bed occupancy and lowest turnover of patients.

Figure (30) Distribution of Performance of General Hospital according to Pabón Lasso technique (2013-2016)

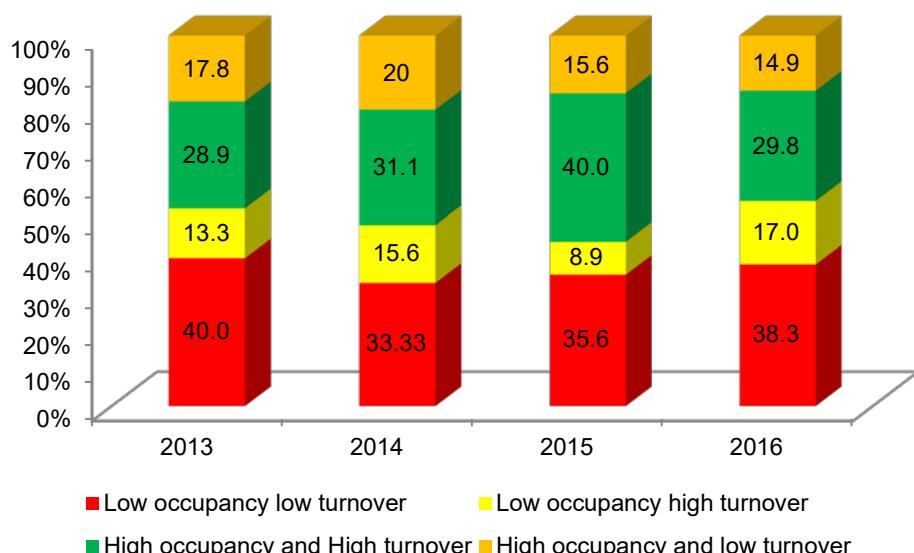

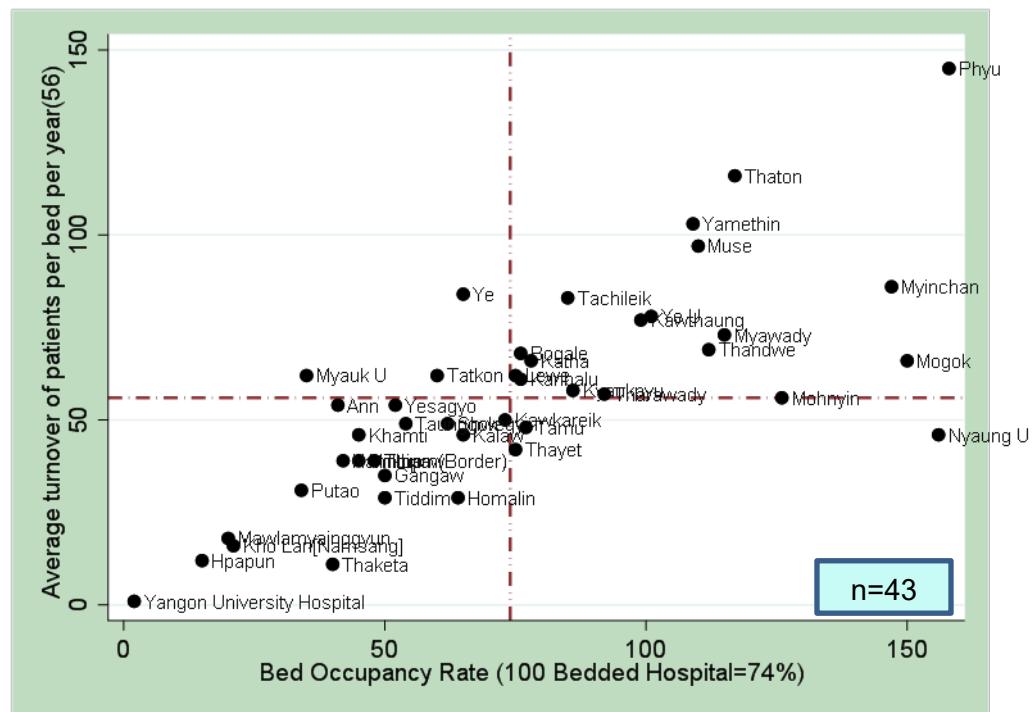

Figure (31) Pabón Lasso graph for 100 bedded hospitals under MOHS (2016)

Note; Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.

n = total number of 100 Bedded Hospitals under MOHS

During 2016, 42% of 100 bedded hospitals have satisfactory level of performance according to Pabón Lasso technique while 44% are in undesirable zone. Phyu hospital has the highest bed occupancy rate and highest turnover of patients per year.

Figure (32) Distribution of Performance of 100 bedded Hospital according to Pabón Lasso technique (2013-2016)

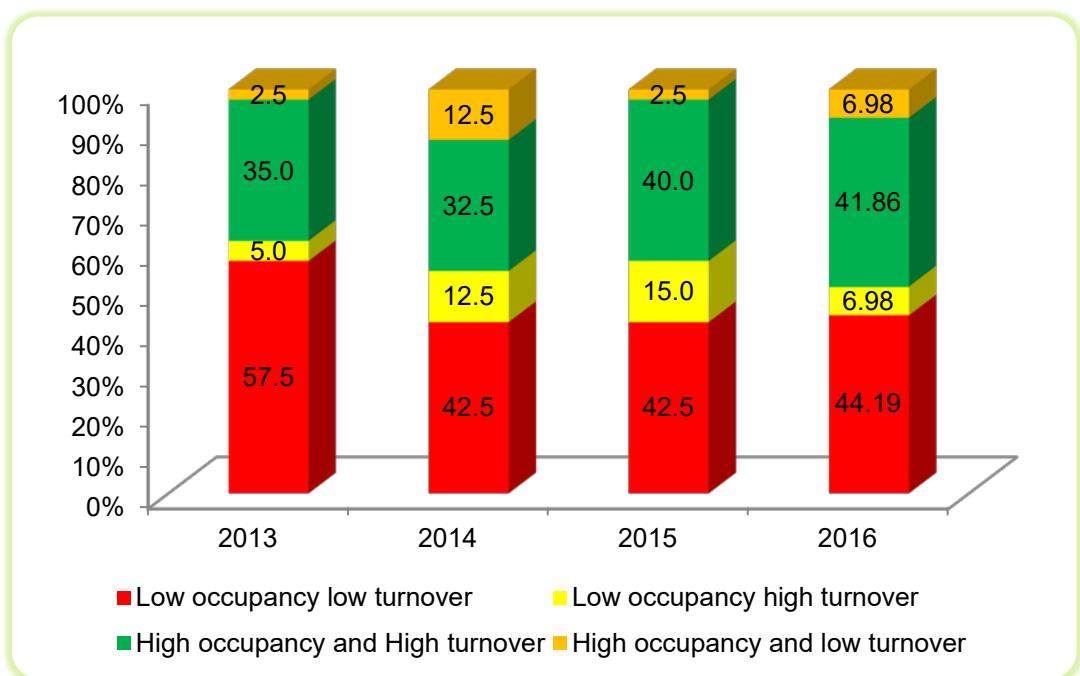

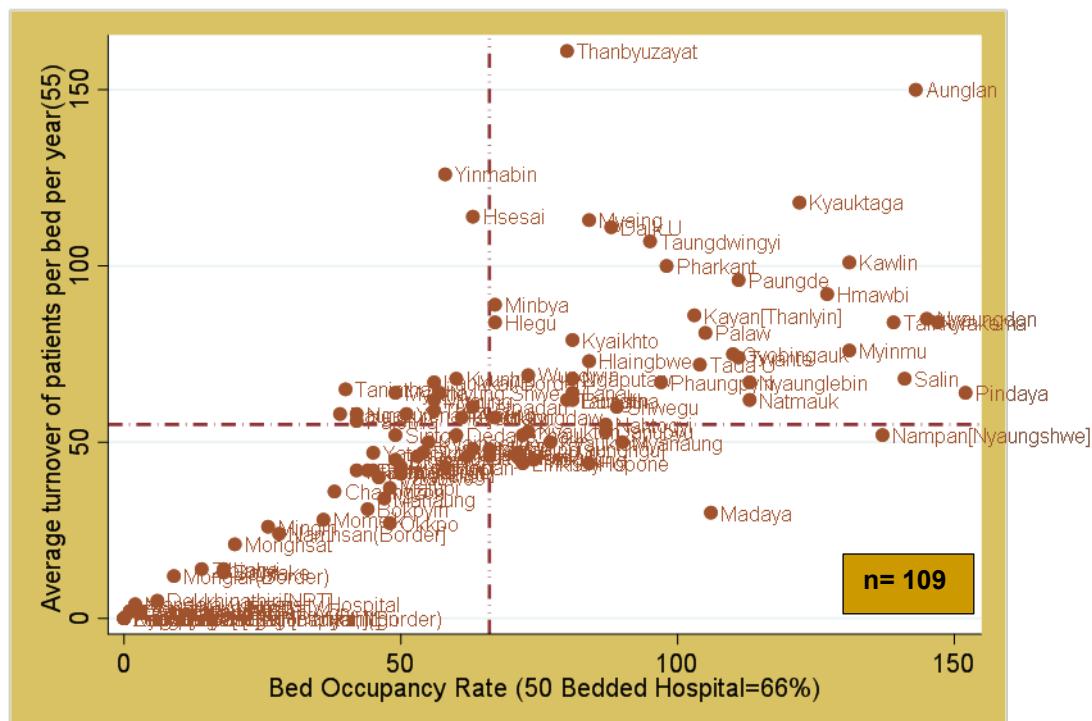

Figure (33) Pabón Lasso graph for 50 bedded hospitals under MOHS (2016)

Note: Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.

n = total number of 50 Bedded Hospitals under MOHS,

Among the 50 bedded hospitals, 33% are in the desirable zone while 40% are found to have low bed occupancy and low turnover of patients per bed per year.

Figure (34) Distribution of Performance of 50 bedded Hospital according to Pabón Lasso technique (2013-2016)

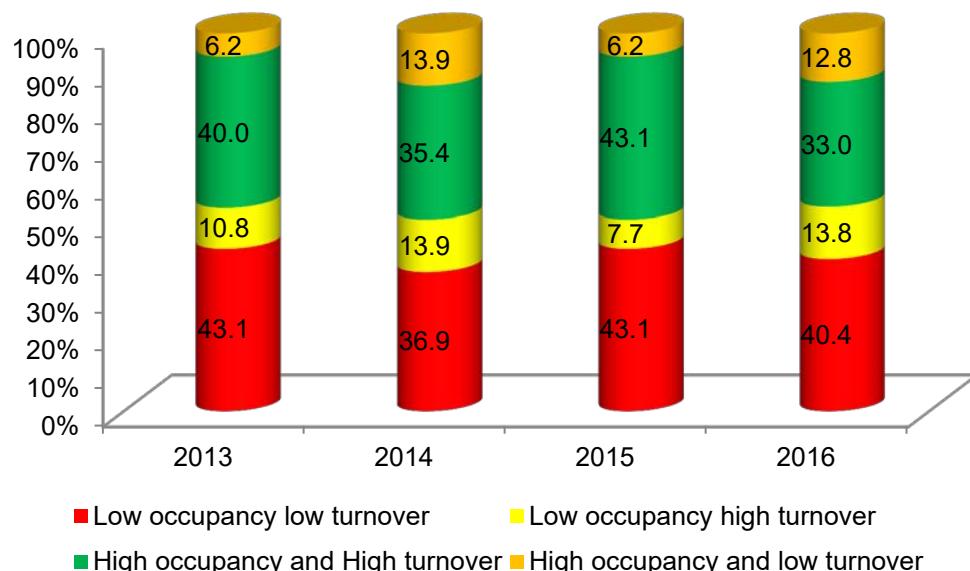

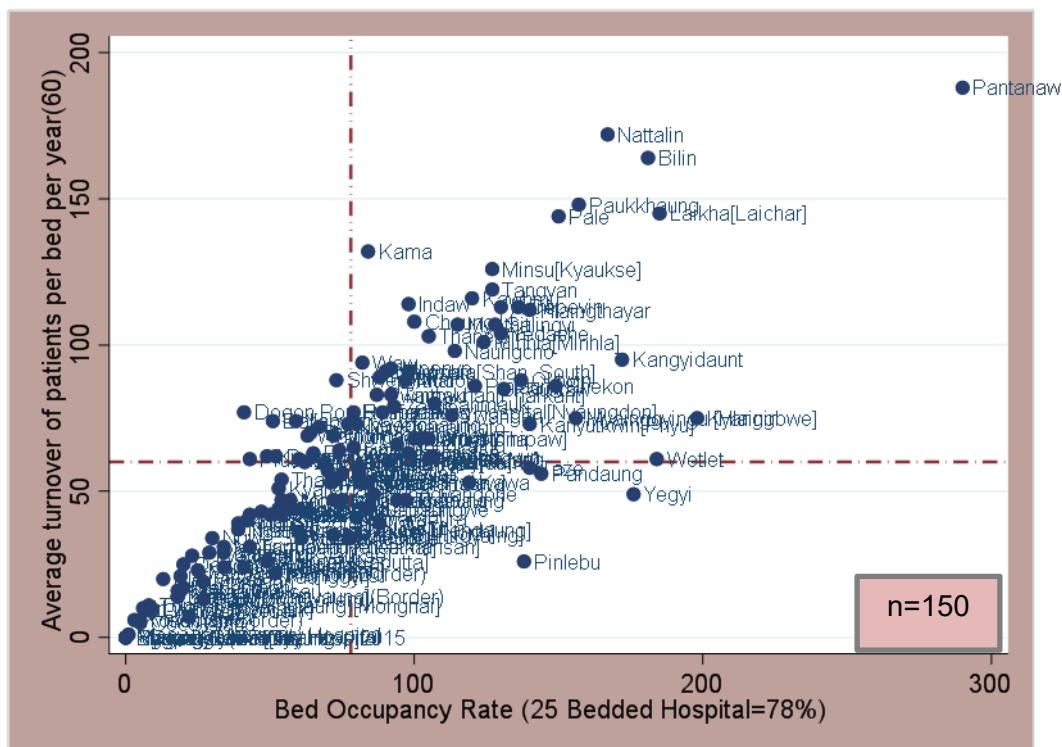

Figure (35) Pabón Lasso graph for 25 bedded hospitals under MOHS (2016)

Note; Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.
n = total number of 25 Bedded Hospitals under MOHS

Among 25 Bedded hospitals, 53 hospitals (35% out of 150 hospitals) have satisfactory level of utilization while 42 % of the hospitals are found to have underutilization of hospital resources.

Figure (36) Distribution of Performance of 25 bedded Hospital according to Pabón Lasso technique (2013-2016)

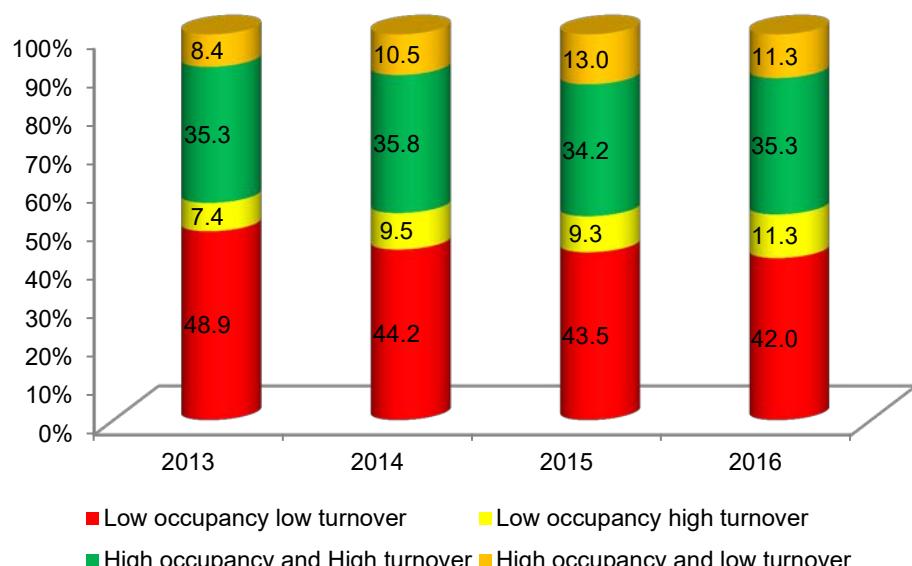

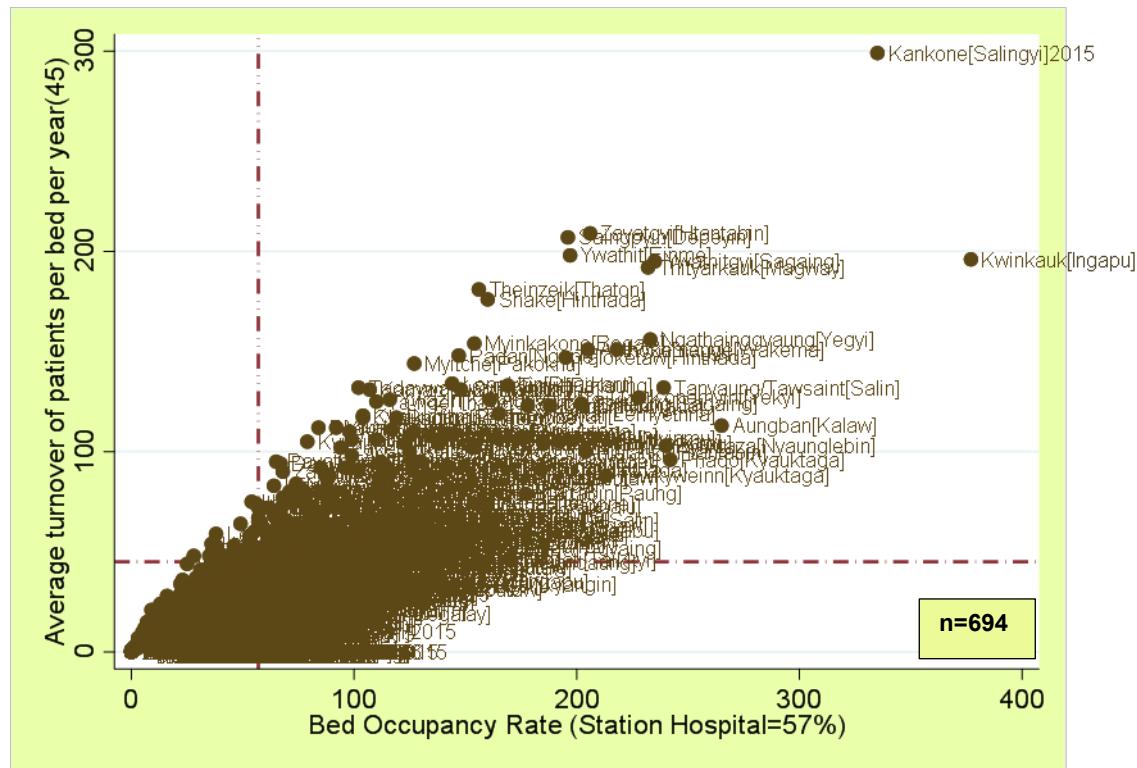

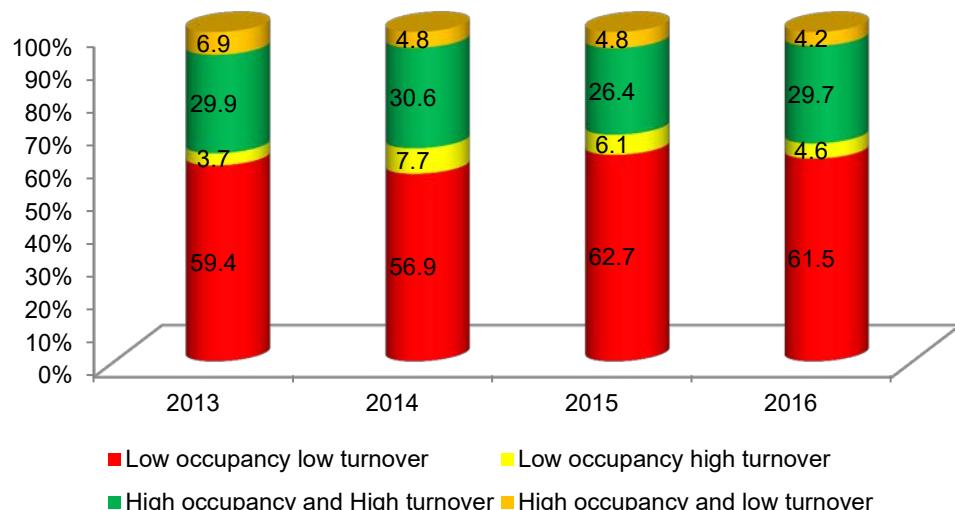

Figure (37) Pabón Lasso graph for Station Hospitals under MOHS (2016)

Note: Non-reporting hospitals were counted as hospitals with poor performance and located in left lower zone.
n = total number of Station Hospitals under MOHS

According to assessment of 694 station hospitals under the Ministry of Health and Sports, 30 % of these hospitals (206 hospitals) were in the desirable zone. Kankone and kwinkauk station hospitals are found to have highest utilization.

Figure (38) Distribution of Performance of Station Hospital according to Pabón Lasso technique (2013-2016)

SURGICAL OPERATIONS, DELIVERIES, STILLBIRTHS AND ABORTIONS IN HOSPITALS

PART D

Surgical operations by type of anaesthesia, live births, still births and abortion are described in PART D.

Figure (39) Total Number of Surgical Operation performed at Public Hospitals by Regions and States (2016)

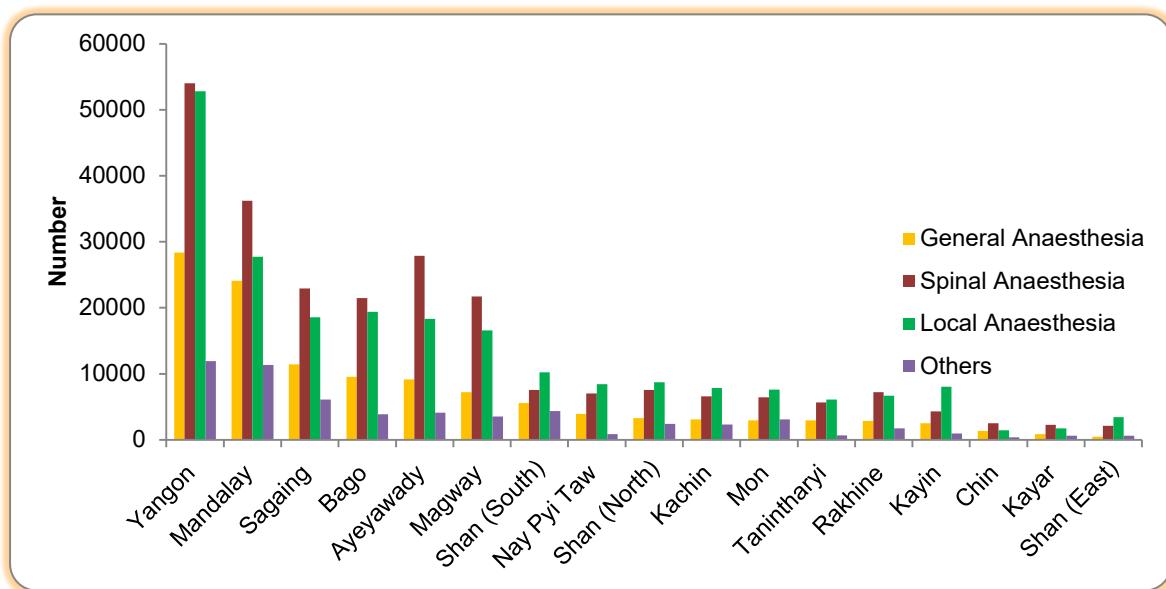

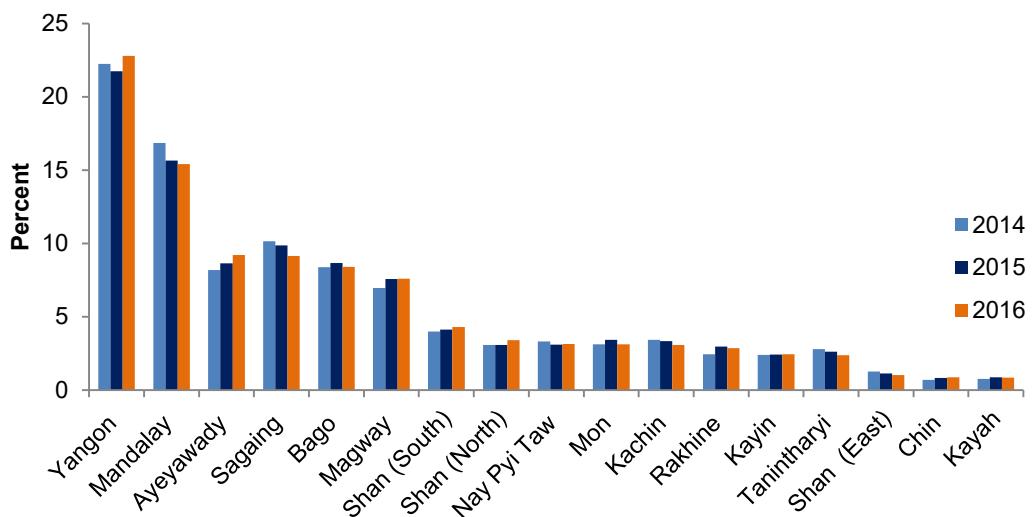

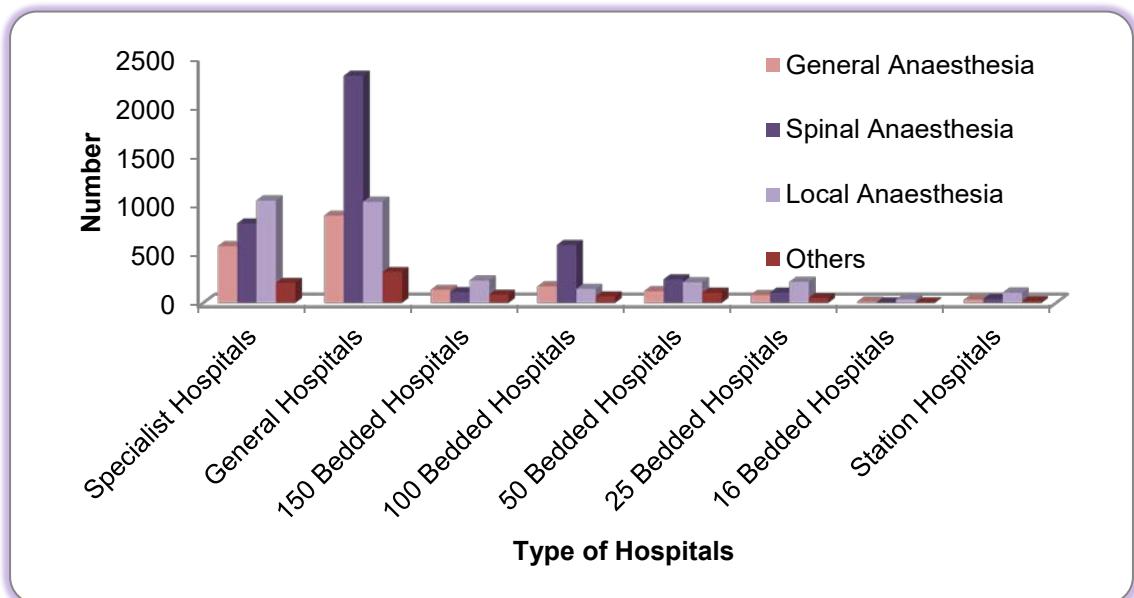

Figure (40) Percent Distribution of Surgical operation Performance by Region and State (2014-2016)

Surgical operations performed under different types of anaesthesia were illustrated by Region and State in the above figures. Public hospitals in Yangon Region were found to have highest level of performance regarding surgical operations which accounted for 22.8% of all operations performed at public hospitals. The second highest was Mandalay Region. Another four regions: Ayeyawady, Sagaing ,Bago, and Magway had performed more than 5% of total surgical operations. In Shan (East), Chin and Kayah States, less than 1% of total surgical operations were performed.

Figure (41) Average Number of Surgical Operation in Each Type of Hospitals (2016)

Note: Specialist hospitals which are not performing any surgical operation (eg, mental hospitals) are not excluded from the list of hospitals. Average number of operation by type of anaesthesia in specialist hospitals may be affected by type of specialty.

Figure (42) Percent Distribution of Surgical operation Performance by Type of Hospitals (2014-2016)

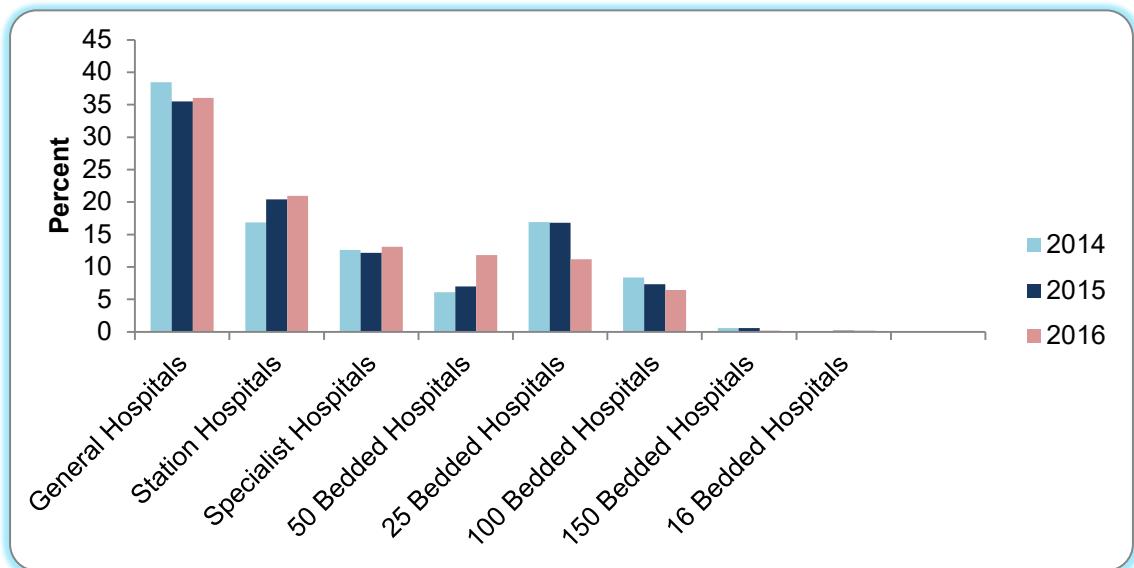

Figure (41 and 42) provides information on surgical operation performance at each type of public hospitals. Various types of surgical operation are mostly performed at general hospitals and surgical operations performed under spinal anesthesia are the highest.

Figure (43) Distributions of Deliveries by Regions and States (2016)

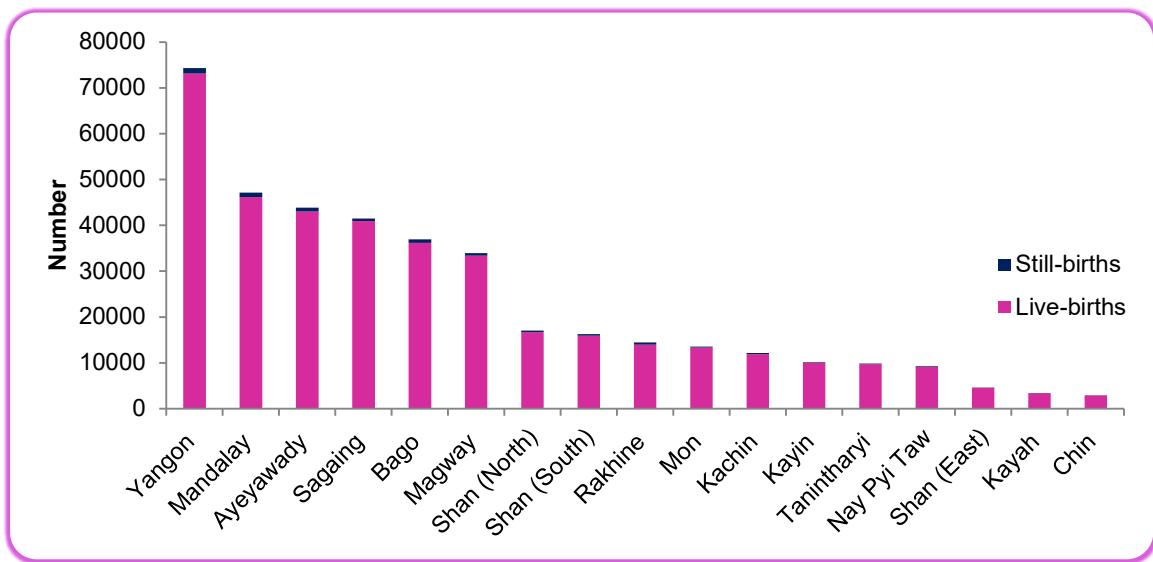

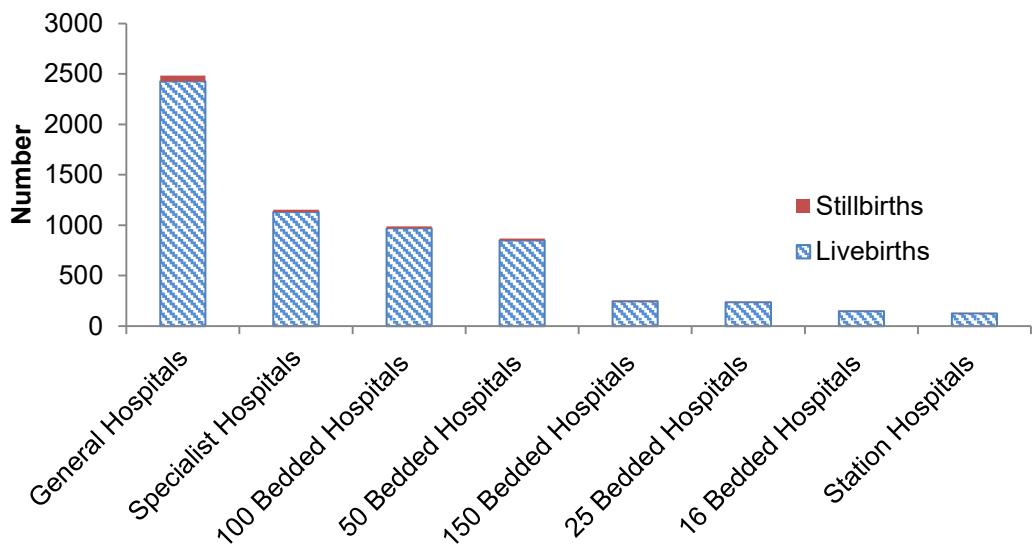

Figure (43) shows utilization of hospital services for deliveries. It was found that hospital deliveries were the highest in Yangon, followed by Mandalay, Ayeyawady and Sagaing. Kayah and Chin had the lowest hospital deliveries.

Figure (44) Average No. of Live births and Stillbirths by type of Hospitals (2016)

Note: The average number of deliveries in specialist hospitals may be affected by its type of specialty.

Distribution of average number of live births and stillbirths in each type of hospitals during 2016 was described in Figure (44). Average numbers of live births and stillbirths in general hospital are the highest.

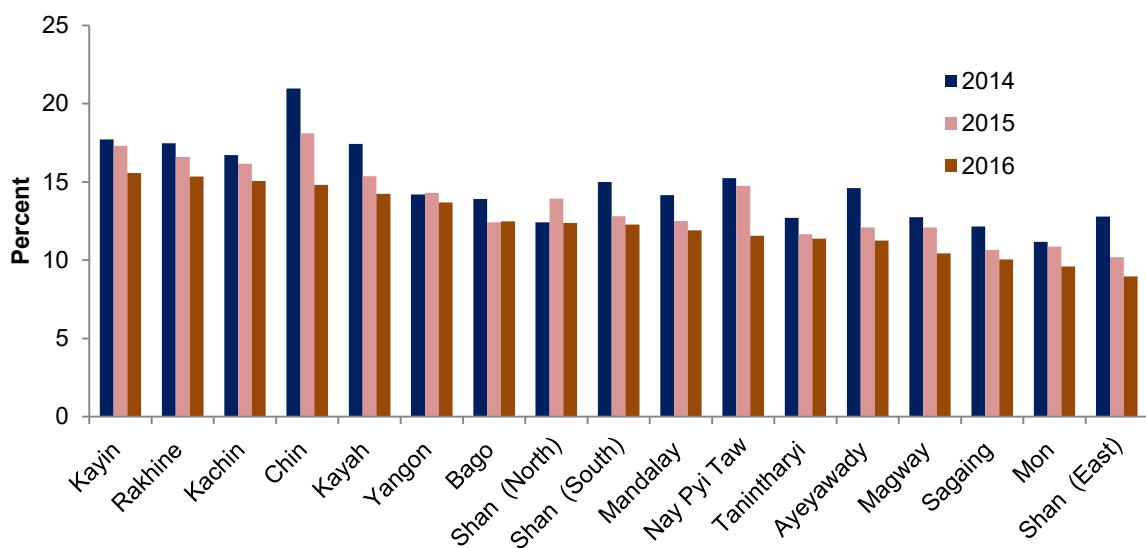

Table (9) Numbers and Percent of Deliveries, Live births, Stillbirths and Abortions by Types of Hospital (2014-2016)

| Sr. No. | Types of Hospital | Year | Deliveries | Live-births | Livebirths as percent of deliveries | Still-births | Stillbirths as percent of deliveries | Abortion | Abortion Rate |

Figure (45) Abortion Rate by Region and State (2014-2016)

Abortion rate as percentage of total deliveries and abortion cases during 2014-2016 are described in Figure (45). Chin State has the highest abortion rate during 2014 and 2015. In 2016, abortion rate is higher in Kayin, Rakhine, Kachin and Chin State.

Figure (46) Abortion Rate by Type of Hospitals (2014-2016)

As shown in Figure (46), abortion cases are highest among hospital delivery cases at 16 bedded hospitals.

SECTION II

MORBIDITY AND MORTALITY STATISTICS

(A) INPATIENT MORBIDITY AND MORTALITY PATTERNS OF HOSPITALS

This section includes morbidity and mortality pattern among all inpatients in public hospitals during 2014-16. In some graphical presentation, causes of morbidity and mortality among all inpatients were described chapter-wise as classified in ICD-10 (International Statistical classification of Disease and Related Health Problems-Version 10). All data were compiled and analyzed with single condition morbidity analysis according to Rules and Guidelines for morbidity and mortality coding (ICD-10, WHO).

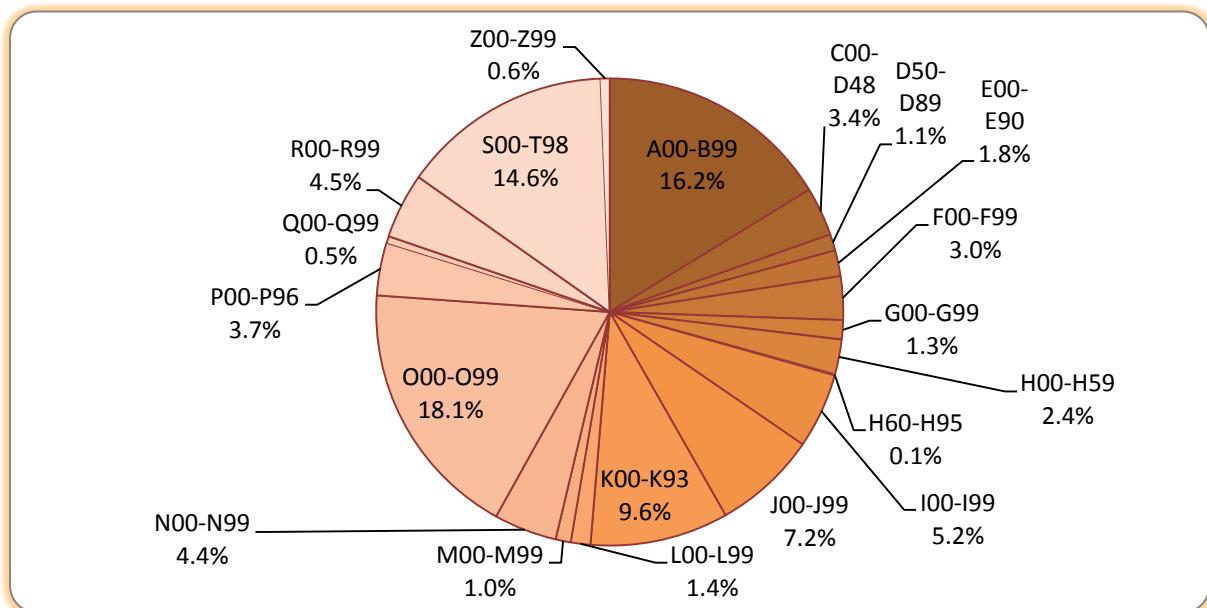

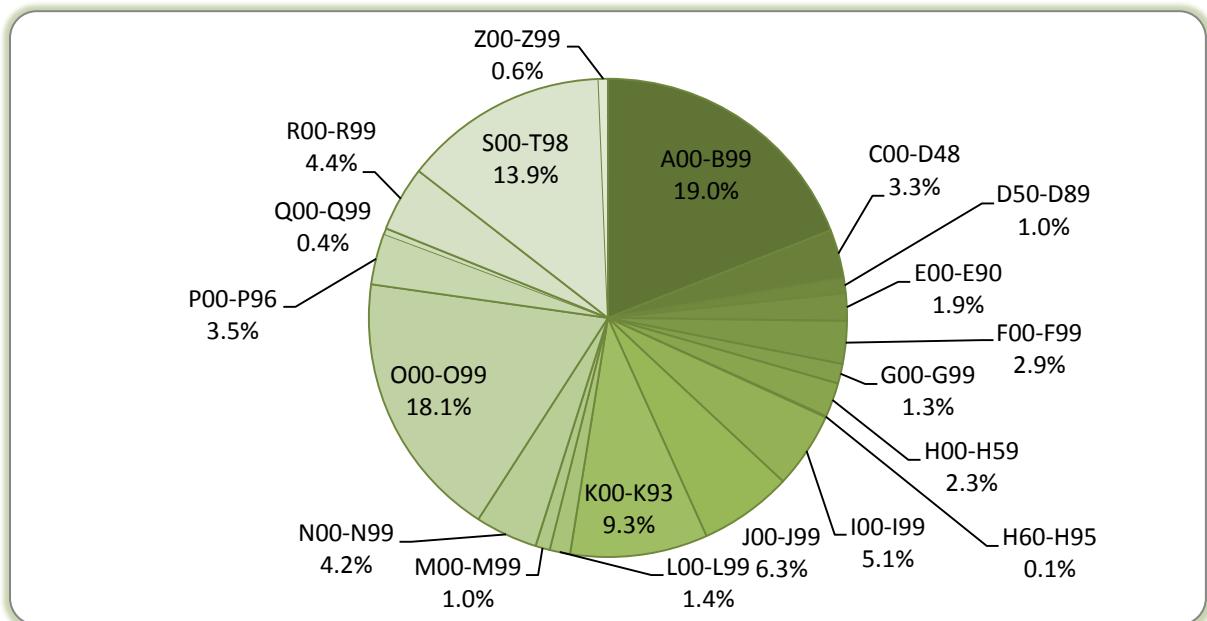

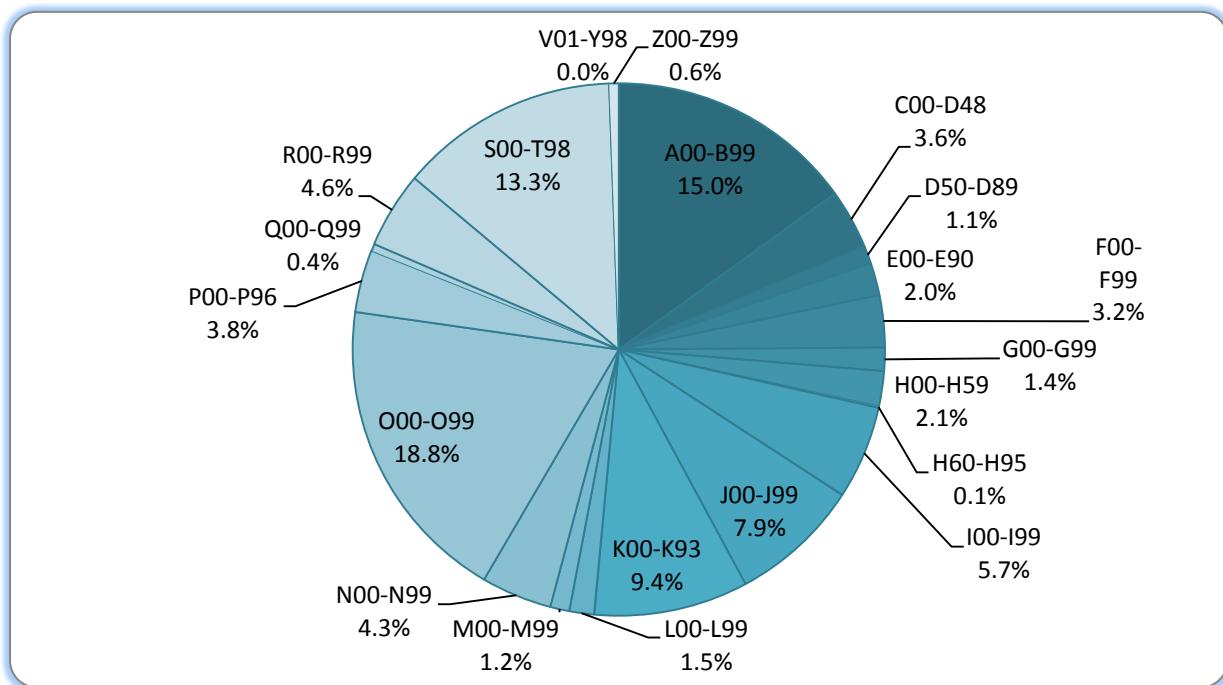

Figure (47-1) Proportional Morbidity of all Cases of Hospitalization (2014)**Figure (47-2) Proportional Morbidity of all Cases of Hospitalization (2015)**

Figure (47-3) Proportional Morbidity of all Cases of Hospitalization (2016)

Note for Figures (47-1 to 47-3):

1. All morbidity data are grouped by Chapters classified as in ICD-10 e.g, A00-B99 is 'Certain infectious and parasitic diseases'. All description for all chapters are shown in Annex 4
2. Because of resource limitation, the codes for types of delivery are taken as main condition and included under the group (O00- O99).

Causes of hospitalization for all inpatients are illustrated in Figure (47-1) to (47-3). Certain infectious and parasitic diseases (A00-B99), conditions relating to pregnancy, child births and puerperium (O00 to O99), injuries, poisoning and certain other consequences of external causes(S00-T98), are found as leading causes of hospitalization.

Estimated proportions of non-communicable diseases among all hospitalized patients during 2014-16 are described in Figure (48-1) to (48-3).

Figure (48-1) Proportional morbidity and estimated proportion of Non-Communicable Diseases (2014)

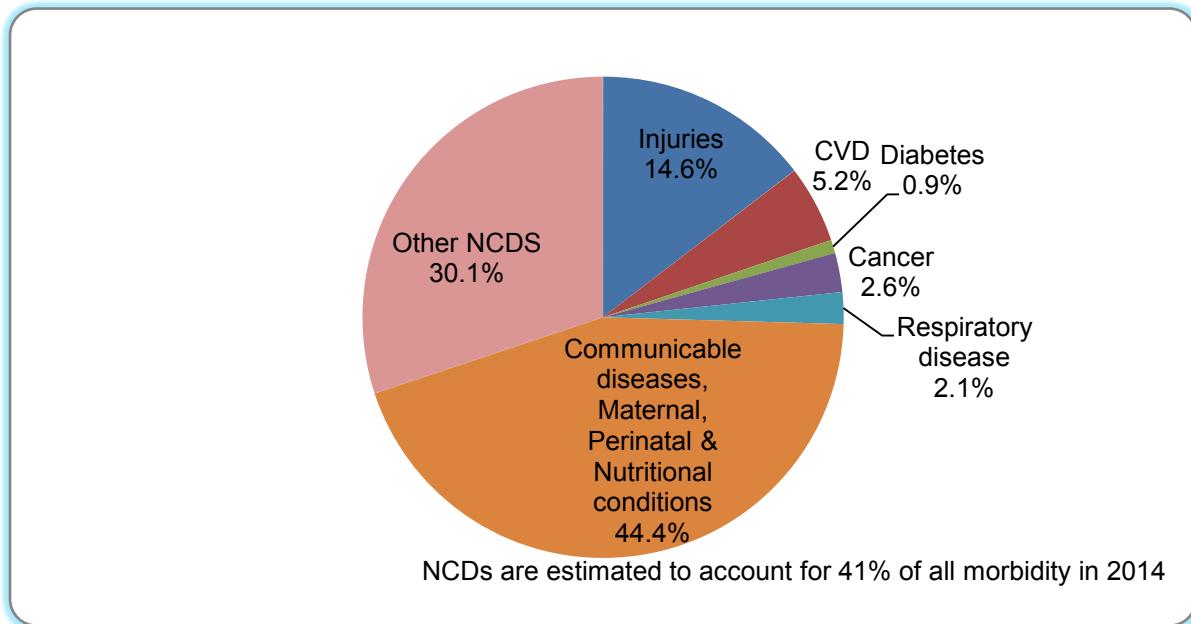

Figure (48-2) Proportional morbidity and estimated proportion of Non-Communicable Diseases (2015)

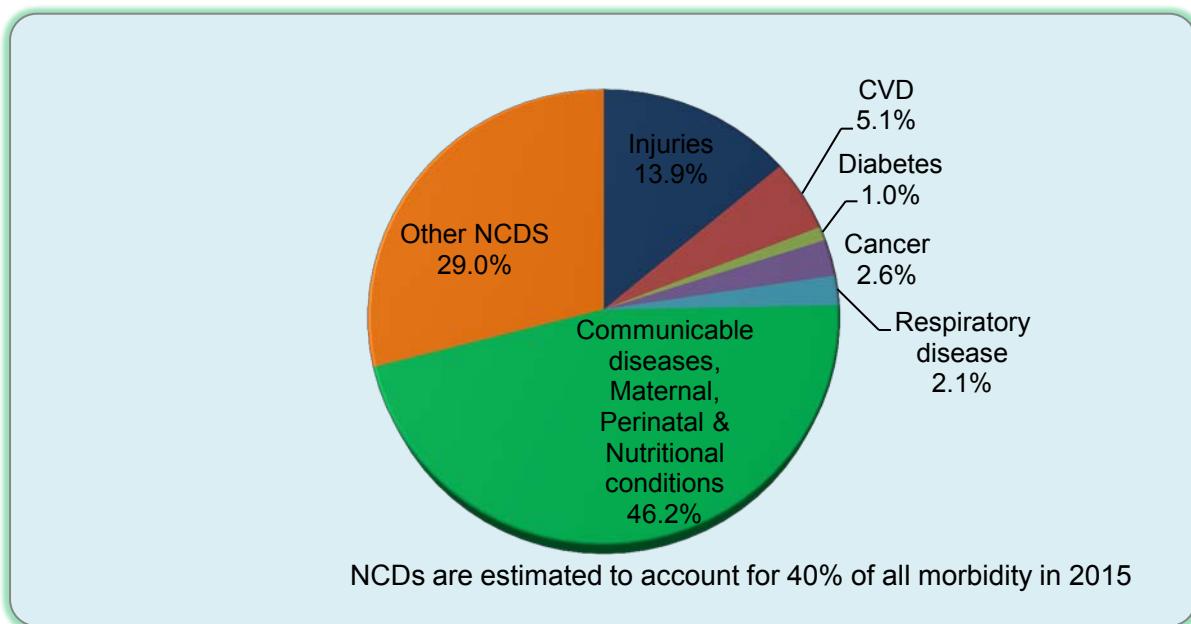

Figure (48-3) Proportional morbidity and estimated proportion of Non-Communicable Diseases (2016)

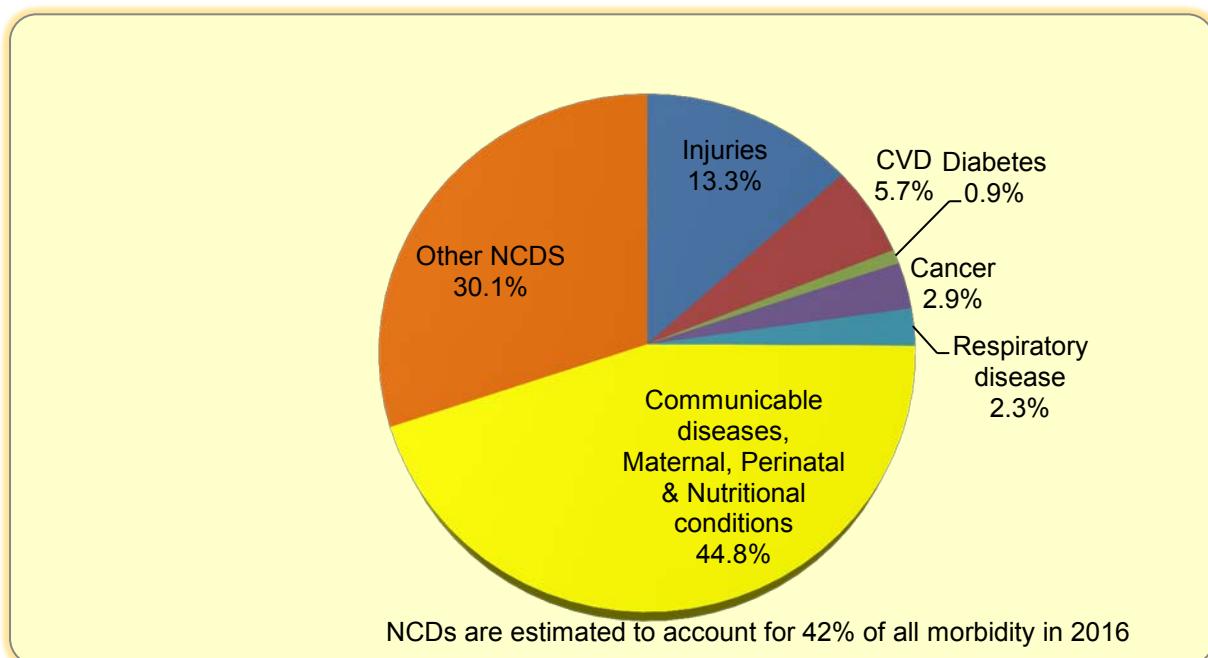

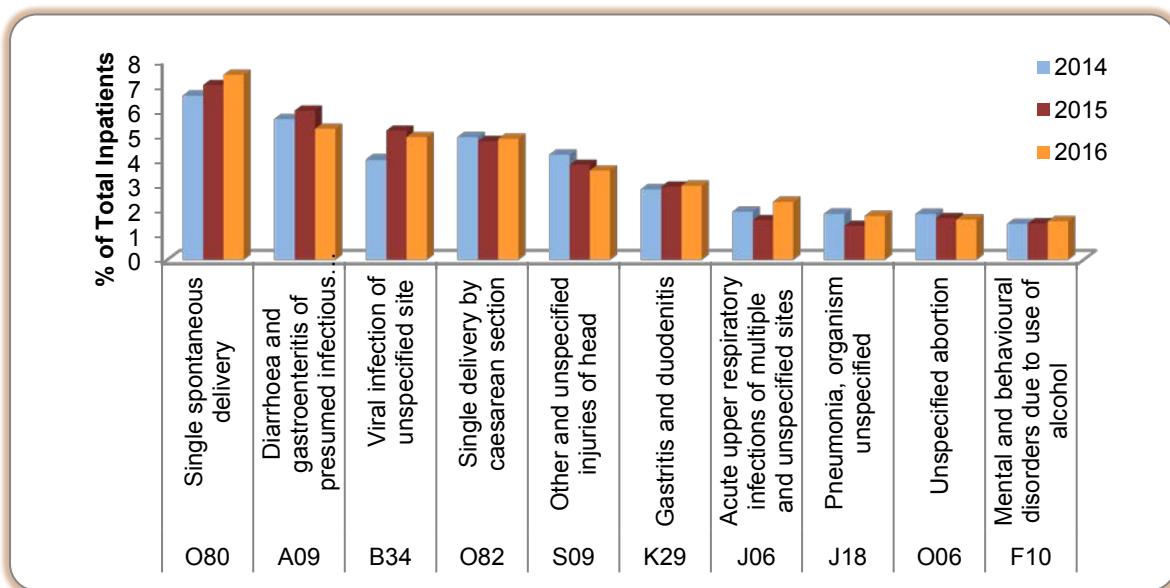

Figure (49) Proportion of Leading causes of Hospitalization among all inpatients (2014-2016)

Ten leading causes of hospitalization during 2016 are described in percentage of total inpatients compared with those in 2014 and 2015. Leading causes of hospitalization are also stated in Table (11-1 to 11-3). Diarrhoea and gastroenteritis of presumed infectious infections and viral infection of unspecified site are leading communicable diseases among hospitalized cases.

Proportional mortality and the estimated proportion of Non-communicable diseases among all cases of mortality during 2014-2016 are described in Figure (50-1) and (50-3). Infectious and parasitic diseases (A00-B99) was the highest proportion of all cases of mortality during 2014 and 2015 but it is the second highest following diseases of the circulatory system (I00-I99) in 2016.

Figure (50-1) Proportional Mortality among all inpatient deaths (2014)

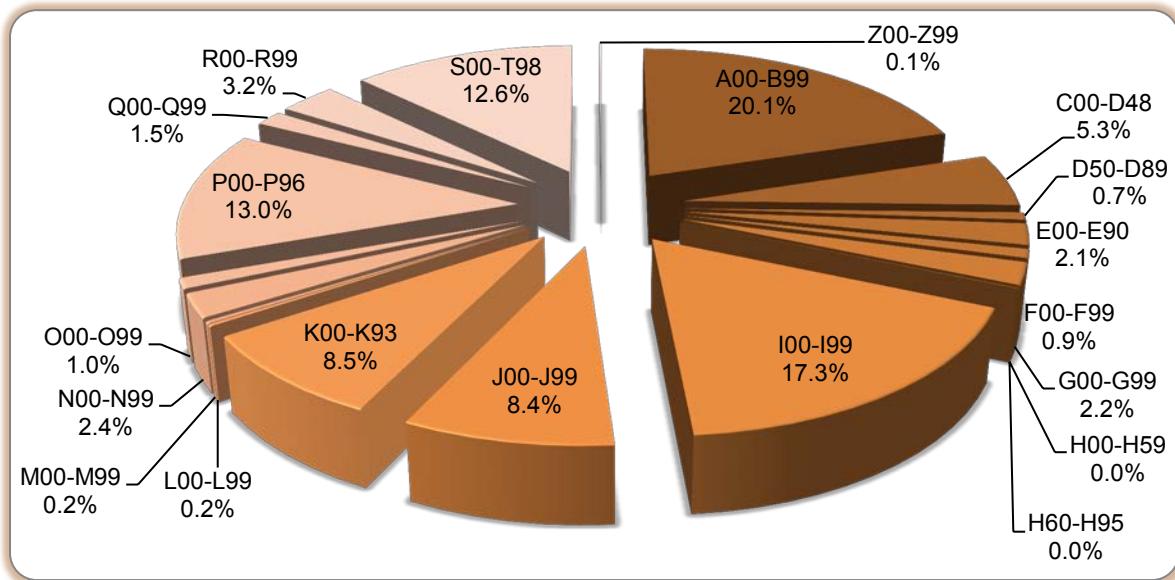

Figure (50-2) Proportional Mortality among all inpatient deaths (2015)

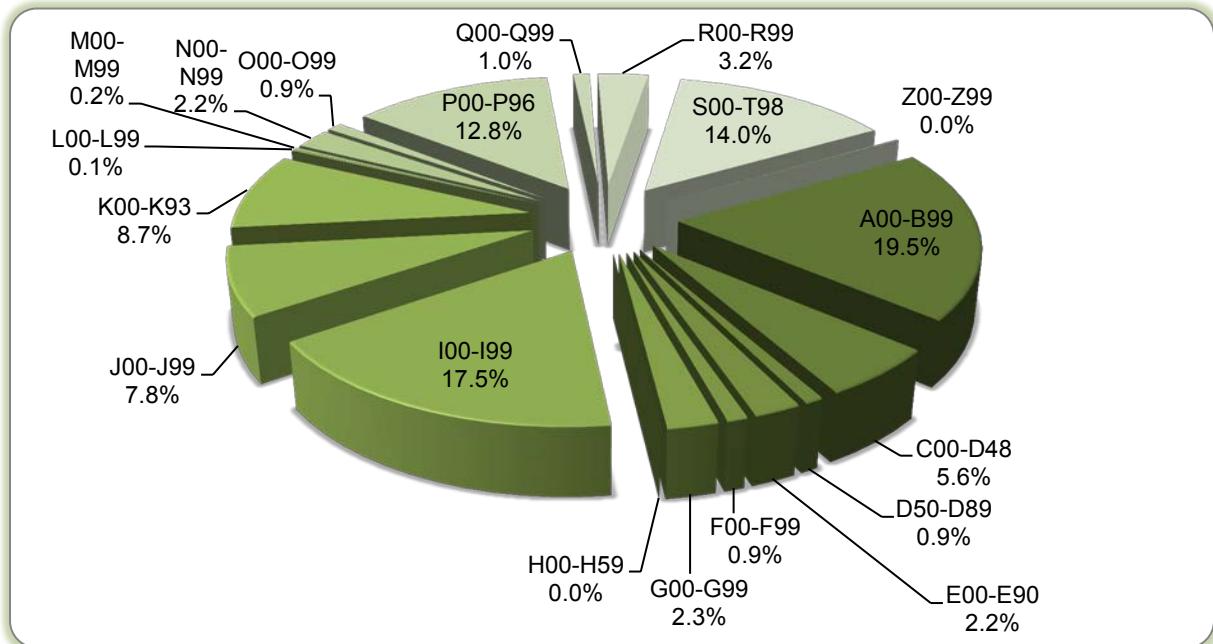

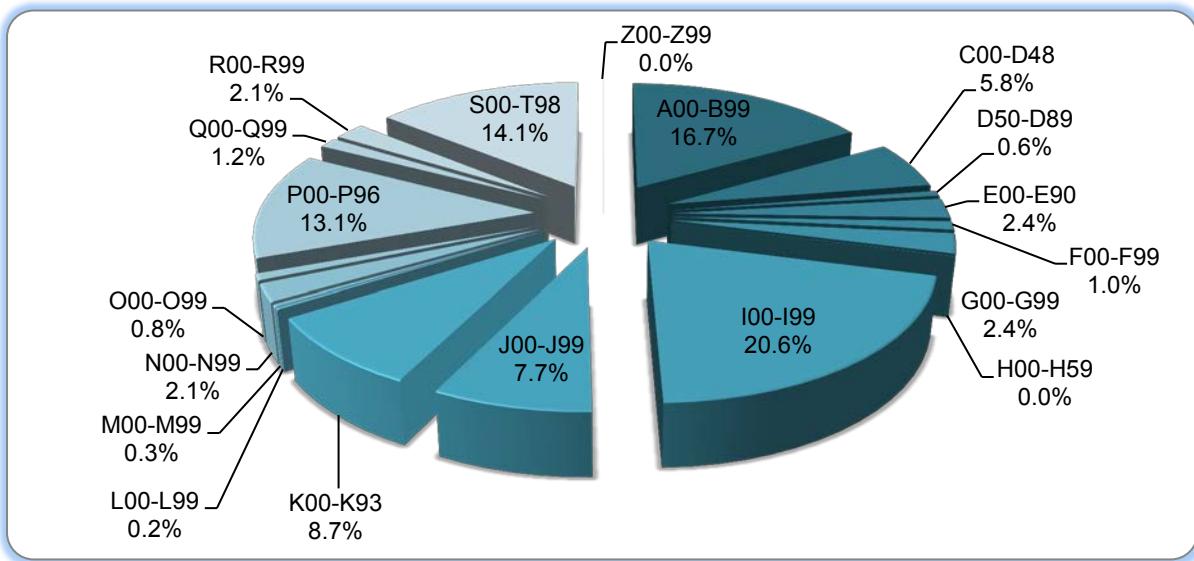

Figure (50-3) Proportional Mortality among all inpatient deaths (2016)

Note for Figure (50-1 to 50-3): All mortality are grouped by Chapters classified as in ICD-10 e.g, A00-B99 is 'Certain infectious and parasitic diseases'. All description for all chapters are shown in Annex 4.

Figure (51-1) Proportional mortality and estimated proportion of Non-communicable diseases (2014)

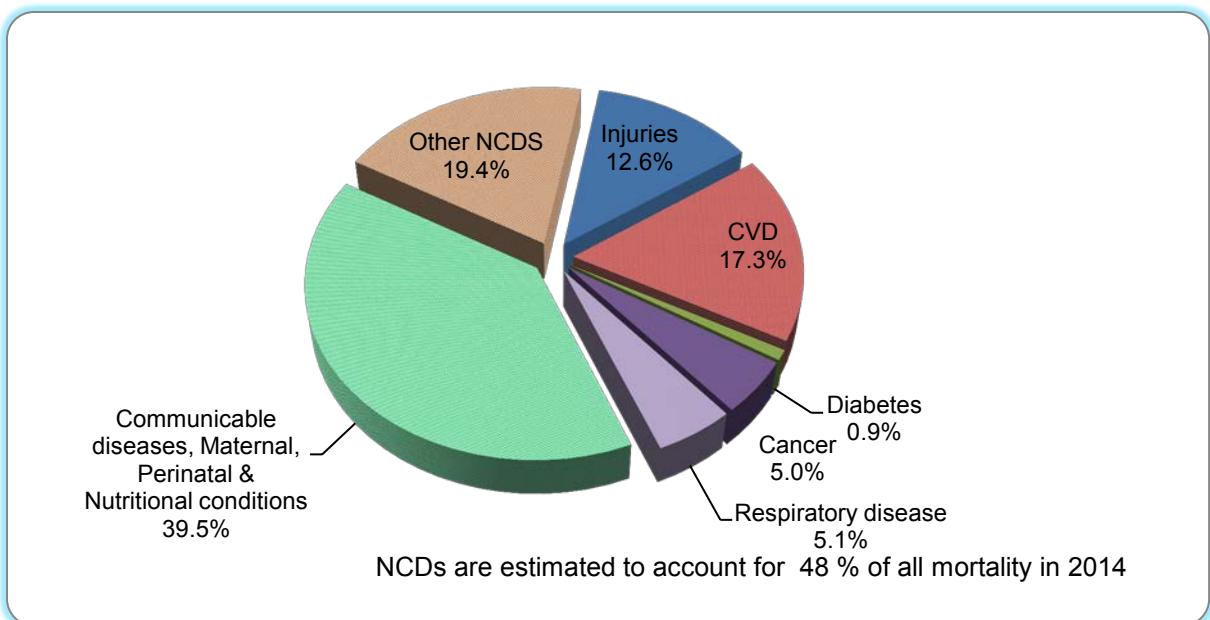

Figure (51-2) Proportional mortality and estimated proportion of Non-communicable diseases (2015)

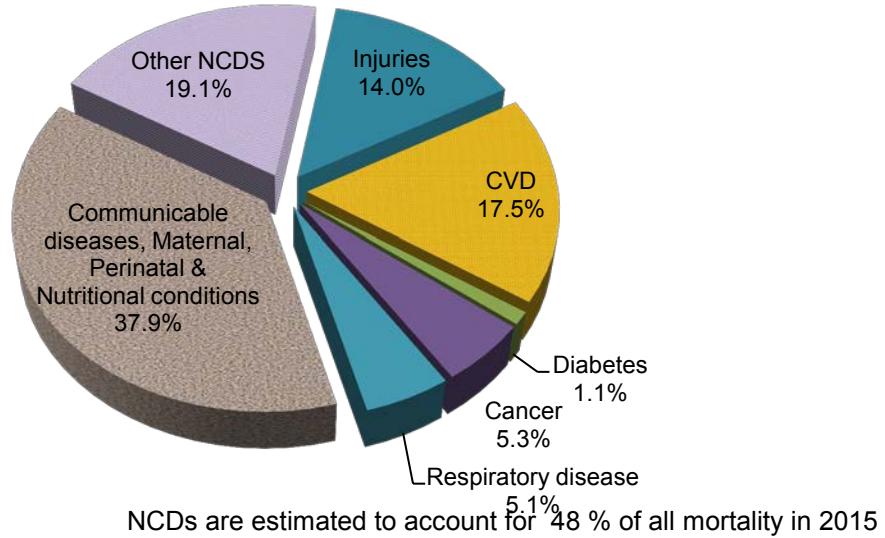

Figure (51-3) Proportional mortality and estimated proportion of Non-communicable diseases (2016)

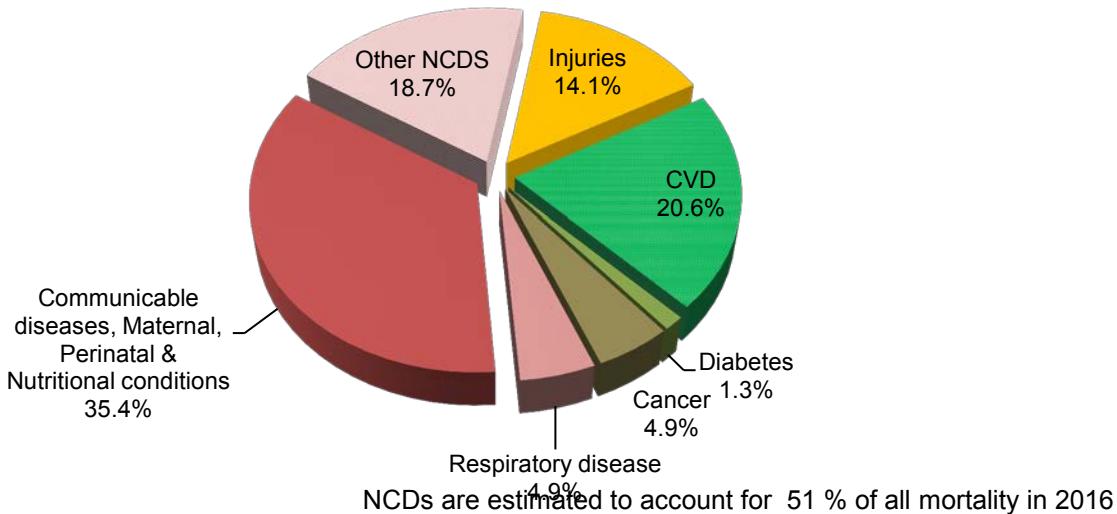

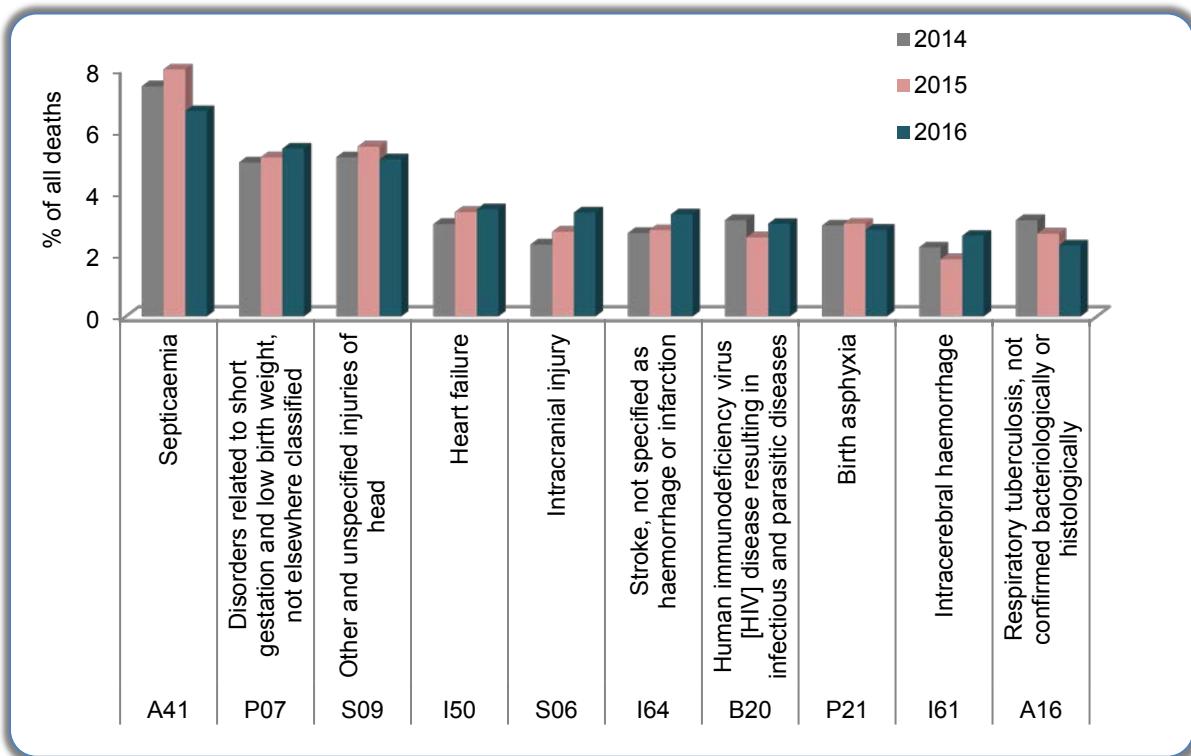

Figure (52) Proportion of Leading causes among all Mortality cases (2014-16)

Leading causes of mortality were described in Figure (52) as percentage of total inpatient deaths and sorted by ten leading causes of mortality in 2016. Septicaemia was found the highest during 2014-2016. Mortality pattern during these years are similar. Head injuries and intracranial injuries including traumatic extradural and subdural haemorrhage is found in the top ten leading causes of mortality.

Table (11-1) Single Leading Causes of Morbidity by Sex & Duration of Stay for Union (2014)

| Sr. No. | ICD-10 Detail List | Causes | Sex | | | | | | Avg. Duration of Stay | |
|---------|--------------------|---|--------|------|---------|------|---------|------|-----------------------|--|
| | | | Male | | Female | | Total | | | |
| | | | Number | % | Number | % | Number | % | | |
| 1 | O80 | Single spontaneous delivery | 0 | 0 | 137274 | 12.0 | 137274 | 6.6 | 3.8 | |
| 2 | A09 | Diarrhoea and gastroenteritis of presumed infectious origin | 62305 | 6.6 | 55351 | 4.8 | 117656 | 5.6 | 3.6 | |
| 3 | O82 | Single delivery by caesarean section | 0 | 0 | 102501 | 8.9 | 102501 | 4.9 | 7.4 | |
| 4 | S09 | Other and unspecified injuries of head | 62471 | 6.7 | 25115 | 2.2 | 87586 | 4.2 | 3.3 | |
| 5 | B34 | Viral infection of unspecified site | 43144 | 4.6 | 40628 | 3.5 | 83772 | 4.0 | 3.7 | |
| 6 | K29 | Gastritis and duodenitis | 27539 | 2.9 | 31497 | 2.7 | 59036 | 2.8 | 4 | |
| 7 | J06 | Acute upper respiratory infections of multiple and unspecified sites | 22436 | 2.4 | 17898 | 1.6 | 40334 | 1.9 | 4.5 | |
| 8 | H26 | Other cataract | 15415 | 1.6 | 24865 | 2.2 | 40280 | 1.9 | 2.5 | |
| 9 | J18 | Pneumonia, organism unspecified | 21600 | 2.3 | 16870 | 1.5 | 38470 | 1.8 | 5 | |
| 10 | O06 | Unspecified abortion | 0 | 0 | 38406 | 3.4 | 38406 | 1.8 | 2.9 | |
| 11 | P59 | Neonatal jaundice from other and unspecified causes | 17293 | 1.8 | 15101 | 1.3 | 32394 | 1.6 | 4.1 | |
| 12 | A91 | Dengue haemorrhagic fever | 15496 | 1.6 | 15600 | 1.4 | 31096 | 1.5 | 3.7 | |
| 13 | F10 | Mental and behavioural disorders due to use of alcohol | 29293 | 3.1 | 843 | 0.1 | 30136 | 1.4 | 6.5 | |
| 14 | A16 | Respiratory tuberculosis, not confirmed bacteriologically or histologically | 16849 | 1.8 | 9328 | 0.8 | 26177 | 1.3 | 7.6 | |
| 15 | I10 | Essential (primary) hypertension | 10507 | 1.1 | 15379 | 1.3 | 25886 | 1.2 | 4.3 | |
| | ... | All other causes | 594995 | 63.3 | 598753 | 52.3 | 1193748 | 57.3 | 6.2 | |
| | | Total | 939343 | 100 | 1145409 | 100 | 2084752 | 100 | 5.4 | |

(*)Based on International Statistical Classification of Diseases and Related Health Problems (ICD-10) coding, the condition to be used for single-condition morbidity analysis is the main condition treated or investigated during the relevant episode of health care. Therefore, single spontaneous delivery is coded and presented as one of the causes of morbidity.

Table (11-2) Single Leading Causes of Morbidity by Sex & Duration of Stay for Union (2015)

| Sr. No. | ICD-10 Detail List | Causes | | | Sex | | | | Avg. Duration of Stay | |
|---------|--------------------|--|---------|------|---------|------|---------|------|-----------------------|--|
| | | | Male | | Female | | Total | | | |

(*)Based on International Statistical Classification of Diseases and Related Health Problems (ICD-10) coding, the condition to be used for single-condition morbidity analysis is the main condition treated or investigated during the relevant episode of health care. Therefore, single spontaneous delivery is coded and presented as one of the causes of morbidity

Table (14) Single Leading causes of Mortality for Union (2012-2016)

| Sr. No. | ICD-10 Code | Description | 2012 | | 2013 | | 2014 | | 2015 | | 2016 | |

OUTPATIENT MORBIDITY STATISTICS

PART B

This section presents outpatient morbidity statistics collected from various outpatient departments all over the country for one day attendance in every season of the year, summer, rainy and winter. Ten percent of attendances of all outpatient departments are described in the following tables.

**Table (66-1) Single leading causes of outpatient morbidity statistics, 2014
[Summer Season]**

| Sr. No. | ICD-10 Basic Code | Causes | Male | | Female | | Total | |
|------------|-------------------------|---|------|------|--------|------|-------|------|
| | | | No. | % | No. | % | No. | % |
| 1 | 270 | Other symptoms, signs and abnormal clinical and laboratory findings | 113 | 13.5 | 187 | 15.5 | 300 | 14.7 |
| 2 | 294 | Antenatal screening and other supervision of pregnancy | 0 | 0.0 | 236 | 19.5 | 236 | 11.5 |
| 3 | 281 | Other injuries of specified, unspecified and multiple body regions | 102 | 12.2 | 50 | 4.1 | 152 | 7.4 |
| 4 | 145 | Essential (primary) hypertension | 53 | 6.3 | 85 | 7.0 | 138 | 6.8 |
| 5 | 268 | Fever of unknown origin | 63 | 7.5 | 45 | 3.7 | 108 | 5.3 |
| 6 | 005 | Diarrhoea and gastroenteritis of presumed infectious origin | 44 | 5.3 | 32 | 2.6 | 76 | 3.7 |
| 7 | 167 | Other acute upper respiratory infections | 43 | 5.1 | 26 | 2.2 | 69 | 3.4 |
| 8 | 041 | Other viral diseases | 24 | 2.9 | 29 | 2.4 | 53 | 2.6 |
| 9 | 179 | Other diseases of the respiratory system | 28 | 3.4 | 23 | 1.9 | 51 | 2.5 |
| 10 | 104 | Diabetes mellitus | 11 | 1.3 | 33 | 2.7 | 44 | 2.2 |
| 11 | 267 | Abdominal and pelvic pain | 20 | 2.4 | 24 | 2.0 | 44 | 2.2 |
| 12 | 184 | Gastritis and duodenitis | 21 | 2.5 | 20 | 1.7 | 41 | 2.0 |
| 13 | 098 | Other anaemias | 7 | 0.8 | 33 | 2.7 | 40 | 2.0 |
| 14 | 007 | Respiratory tuberculosis | 19 | 2.3 | 16 | 1.3 | 35 | 1.7 |
| 15 | 217 | Other diseases of the urinary system | 14 | 1.7 | 18 | 1.5 | 32 | 1.6 |
| | | All Other Causes | 273 | 32.7 | 352 | 29.1 | 625 | 30.6 |
| | | Total | 835 | 100 | 1209 | 100 | 2044 | 100 |

Note: Outpatient morbidity statistics represent 10% of attendance during one day of each season.

**Table (66-2) Single leading causes of outpatient morbidity statistics, 2015

SECTION III

PRIVATE HOSPITAL STATISTICS

PRIVATE HOSPITAL STATISTICS

During 2016, 187 registered private hospitals from 15 Regions and States are reporting hospital information. The reporting status together with number of registered private hospitals is illustrated in the following figure. One private hospital from Rakhine and Shan (East) is found to have full response rate. Ninety-one percent of registered hospitals in Bago Region are reporting during 2016. Yangon had the highest number of private hospitals and the reporting status is 65.8%. Shan (South), Shan (North) and Kayin has the lowest response rate.

Figure (75) Reporting Status of the Private Hospitals by Regions and States (2016)

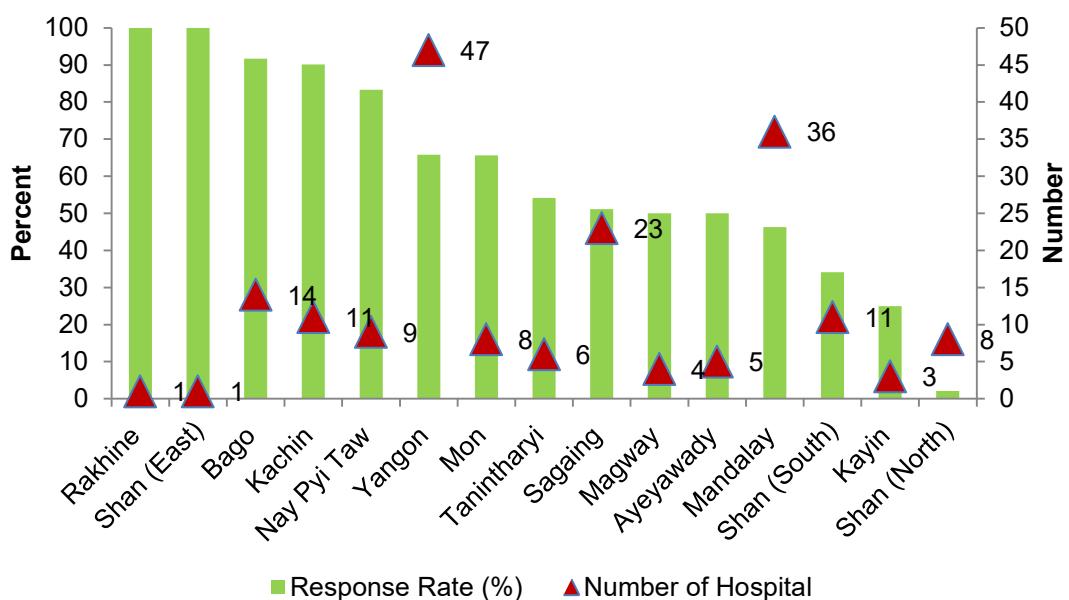

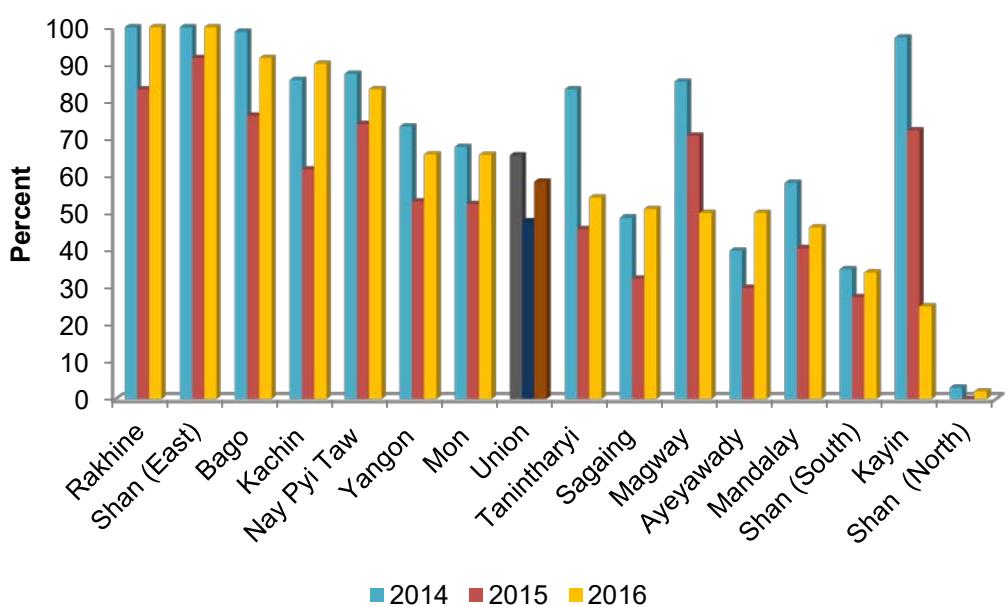

Figure (76) Reporting Rate (%) of Private Hospitals (2014-2016)

According to Figure (76), Reporting rate of Tanintharyi, Magway and Kayin is found to have significant fall in reporting status during 2014-16.

Table (69) Reporting Status of the Private Hospitals by the Number of Months Reported (2016)

| Region and State | Number of hospitals by months reported | | | | | | | | Total hospitals | Response rate (%) | | |
|------------------|--|------|-------------|------|------------|------|---------|------|-----------------|-------------------|--|--|
| | 12 Months | | 6-11 Months | | 1-5 Months | | 0-Month | | | | | |
| | No. | % | No. | % | No. | % | No. | % | | | | |
| Kachin | 9 | 12.3 | 1 | 2.6 | 0 | 0 | 1 | 1.5 | 11 | 90.2 | | |
| Kayin | 0 | 0.0 | 1 | 2.6 | 0 | 0 | 2 | 3.0 | 3 | 25.0 | | |
| Sagaing | 7 | 9.6 | 5 | 12.8 | 1 | 12.5 | 10 | 14.9 | 23 | 51.1 | | |
| Tanintharyi | 2 | 2.7 | 1 | 2.6 | 1 | 12.5 | 2 | 3.0 | 6 | 54.2 | | |

SECTION IV

ANNEXES

Hospital Administrative Indicators

1. Average number of out-patients per day

$$= \frac{\text{Total number of outpatient attendances}}{\text{Number of working days in year}}$$

2. Average number of Inpatients per day

$$= \frac{\text{Total number of patient days}}{365 (\text{Number of days in year})}$$

3. Average duration of stay (in days)

$$= \frac{\text{Total number of patient days}}{\text{Number of discharges & deaths}}$$

4. Percentage of occupancy based on available beds

$$= \frac{\text{Average number of inpatients per day} \times 100}{\text{Number of available beds}}$$

5. Percentage of occupancy based on sanctioned beds

$$= \frac{\text{Average number of inpatients per day} \times 100}{\text{Number of sanctioned beds}}$$

6. Average turnover of patients per bed per year

$$= \frac{\text{Number of discharges & deaths}}{\text{Number of available beds}}$$

7. Average turnover interval [in days]

$$= \frac{[(\text{Available beds} \times 365) - \text{patient days}]}{\text{Number of discharges & deaths}}$$

8. Hospital Death Rate

$$= \frac{\text{Number of deaths} \times 100}{\text{Number of discharges & deaths}}$$

Description of Chapters of ICD-10

- Chapter I Certain infectious and parasitic diseases (A00- B99)
- Chapter II Neoplasms (C00-D48)
- Chapter III Diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism (D50-D89)
- Chapter IV Endocrine, nutritional and metabolic diseases (E00-E90)
- Chapter V Mental and behavioural disorders (F00-F99)
- Chapter VI Diseases of the nervous system (G00-G99)
- Chapter VII Diseases of the eye and adnexa (H00-H59)
- Chapter VIII Diseases of the ear and mastoid process (H60-H95)
- Chapter IX Diseases of the circulatory system (I00- I99)
- Chapter X Diseases of the respiratory system (J00-J99)
- Chapter XI Diseases of the digestive system (K00-K93)
- Chapter XII Diseases of the skin and subcutaneous tissue (L00-L99)
- Chapter XIII Diseases of the musculoskeletal system and connective tissue (M00-M99)
- Chapter XIV Diseases of the genitourinary system (N00-N99)
- Chapter XV Pregnancy, childbirth and the puerperium (O00-O99)
- Chapter XVI Certain conditions originating in the perinatal period (P00-P96)
- Chapter XVII Congenital malformations, deformations and chromosomal abnormalities (Q00-Q99)
- Chapter XVIII Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified (R00-R99)
- Chapter XIX Injury, poisoning and certain other consequences of external causes (S00-T98)
- Chapter XX External causes of morbidity and mortality (V01-Y98)
- Chapter XXI Factors influencing health status and contact with health services (Z00-Z99)
- Chapter XXII Codes for special purposes
