
1. Overview

- Over 17 million people across 57 townships reported being impacted after one week. Most affected areas: Mandalay, Sagaing, Magway, Southern Shan, Naypyidaw, and Bago. Last mile delivery under assessments.
- Rapid needs assessments ongoing and Myanmar Humanitarian Response Plan under revision.
- Logistics partners are encountering significant challenges in transporting humanitarian cargo due to damaged roads, collapsed bridges, debris, and shortages of electricity and telecommunications.
- Logistics Cluster activation is under discussion, while the team is already mobilised to gather and share logistics updates with the humanitarian community and surge capacity deployed to Bangkok and Myanmar.
- Transport and warehouse space are clear gaps identified by partners. The [Logistics Cluster Rapid Gaps and Needs Analysis survey](#) is open until today to get additional information. Results will be shared shortly.

2. Coordination & Information Management

- The [Logistics Cluster Rapid Gaps and Needs Analysis survey](#) is open until today. Humanitarian organizations are invited to participate in order to evaluate the planned relief items pipeline and capacity requirements, including transportation and storage.
- National logistics coordination meetings are held online twice a week, every Tuesday and Friday. **The next meeting is scheduled for Tuesday, April 8 at 2PM Yangon time (GMT +06:30).** Contact global.logcluster@wfp.org to receive invitations and join the WhatsApp group.
- Logistics Cluster partners are organising charter flights and managing consignee arrangements (UNICEF, ECHO, and HULO); conducting logistics needs and securing storage capacity in Mandalay (WFP); assessing last mile and collecting information on road conditions (CESVI). AHA Centre is planning cargo flights from Malaysia and ECHO on stand-by to provide additional support for ground handling cargo coming from Manila.
- Unclear picture on partners' capacity in terms of temperature-controlled logistics (transport and storage). The Logistics Cluster is engaging with health actors to identify actual gaps and potential solutions.
- Ongoing discussions are taking place with Logistics Cluster stakeholders and private sector entities for airport capacity augmentation, provision of expertise, and asset allocation (incl. temperature-controlled storage of +15°C to +25°C). For further information: [notes from today's National Logistics Coordination Meeting](#).
- Information on customs clearance and importation procedures can be obtained by reaching out to the "IMPortation and Customs Clearance Together" (IMPACCT) working group: impacct.2021@gmail.com

3. Logistics Updates

- To access latest updates, but also **to share information on physical access conditions** with the humanitarian logistics community:
 - [Dynamic mapping platform LogIE for visual information about physical access constraints](#);
 - [Myanmar Earthquake response page](#) on the Logistics Cluster website;
 - [Logistics Cluster mobile application](#) for live alerts (available for Android and Apple).
