Ethical Dilemmas in Needs Assessments

An alleged community leader from a village you do not have access to, tells you that 50,000 people in that village are in urgent need of food. What would you do?

**Include
50k people
in your
assessment**

**Do not
include
them**

On your way to assess a community that was stranded in a valley after trying to flee an area of conflict, you are stopped at a checkpoint. The commander of the checkpoint tells you: “they are okay, they have plenty of food and water.” He points you in a different direction claiming that you will find a group of people that are in urgent need and haven’t received any assistance in the past two months.

**Will you visit
the second
community?**

**Will you continue
with your original
plan?**

You have difficulty accessing some of your designated locations for data collection. An armed group which seems to be in control of the area of concern offers to escort you to the area. Do you accept?

Accept

Don't accept
